Topic: Project Setup, Modern Admin Panel Part 1

Speaker: Udemy Instructor Destiny | Notebook: Health Management System Using Django

---

1. Create a new folder and a new environment. Activate it.

```
$ python -m venv venv
$ source venv/scripts/activate
$ pip freeze
$ pip install django
```

2. Create a new project: in this new folder.

```
$ django-admin startproject HMS_main.
```

3. Run the server:

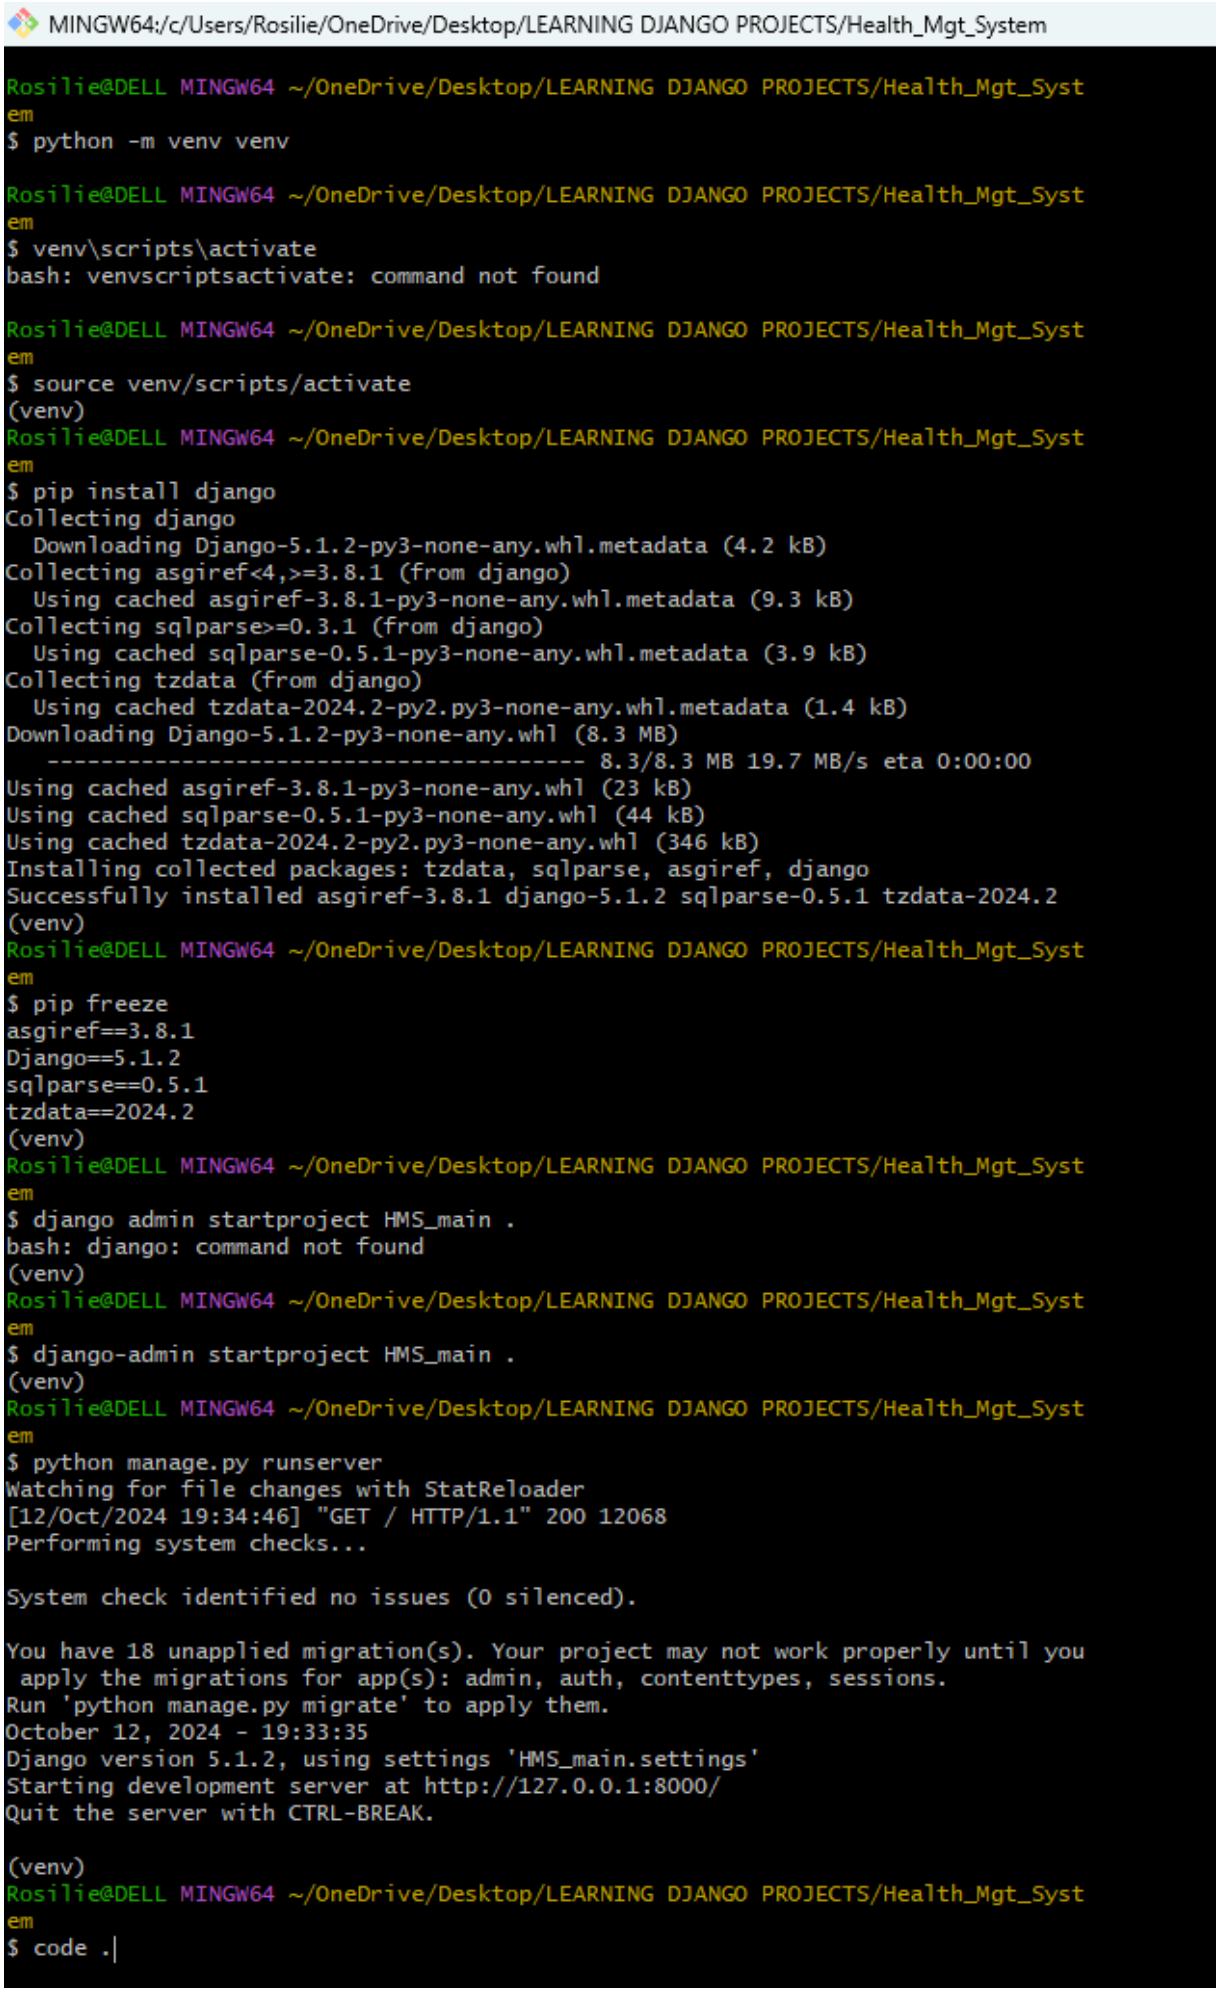

```
$ python manage.py runserver
```

```
http://localhost:8000/
```

4. Open now a VS Code with this folder or type:

```
$ code .
```

```
* we have to use PIP INSTALL DJANGO again in VS Code's terminal.
```

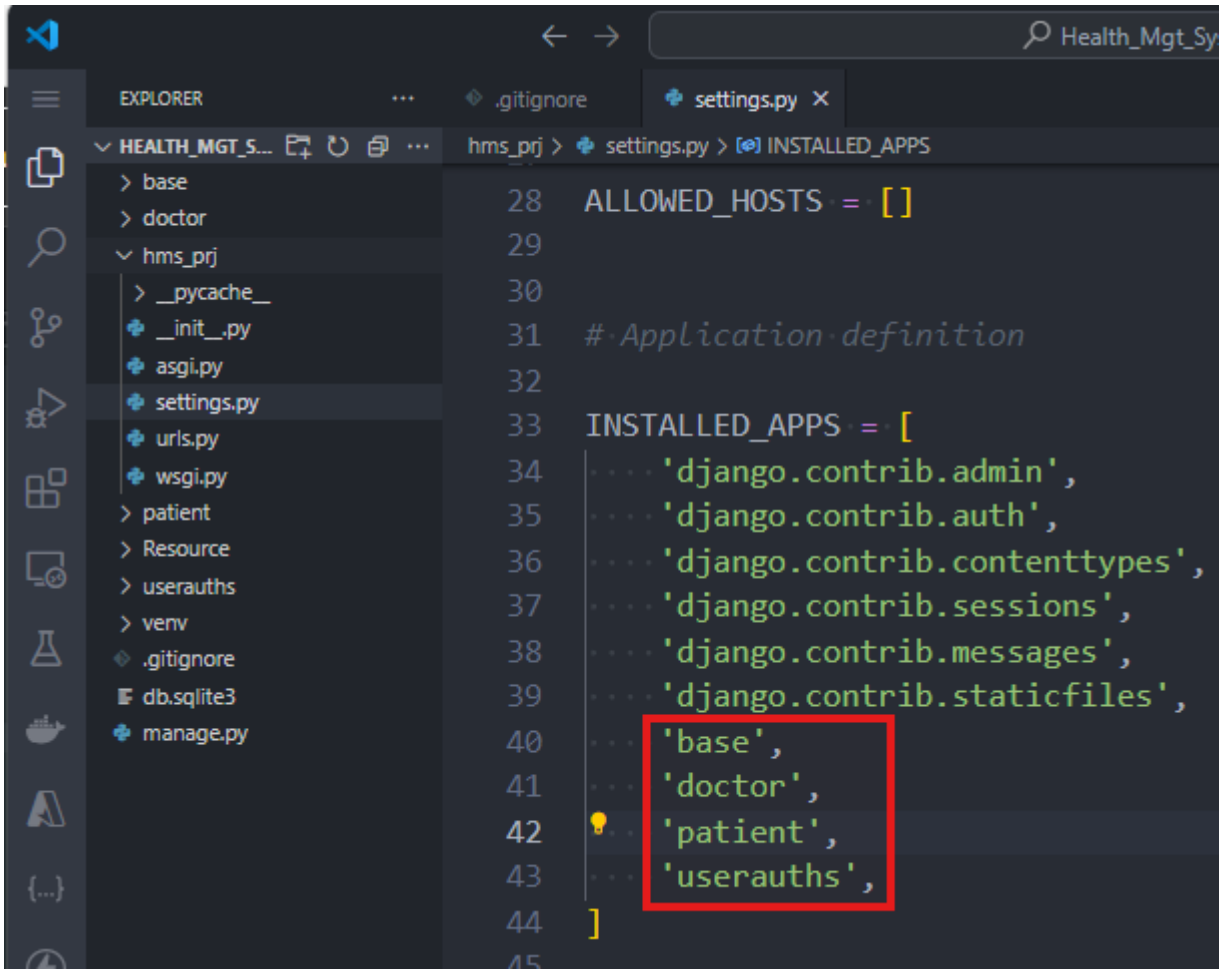

5. Create new apps and update SETTINGS.PY. I CHANGED THE PROJECT NAME FROM **'hms_prj'** TO '**HMS_MAIN'**

```
$ python manage.py startapp base

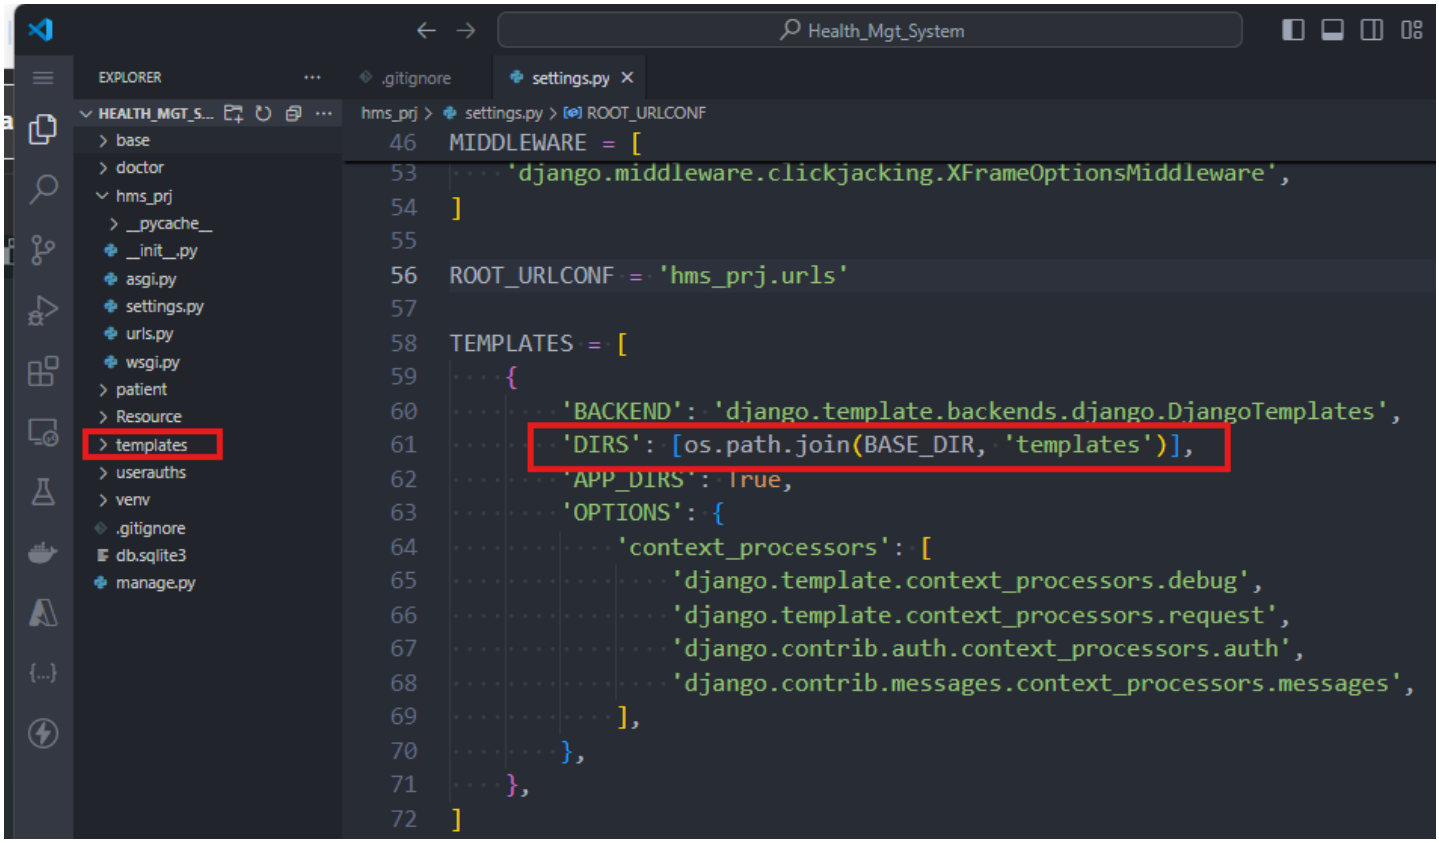

$ python manage.py startapp doctor

$ python manage.py startapp patient

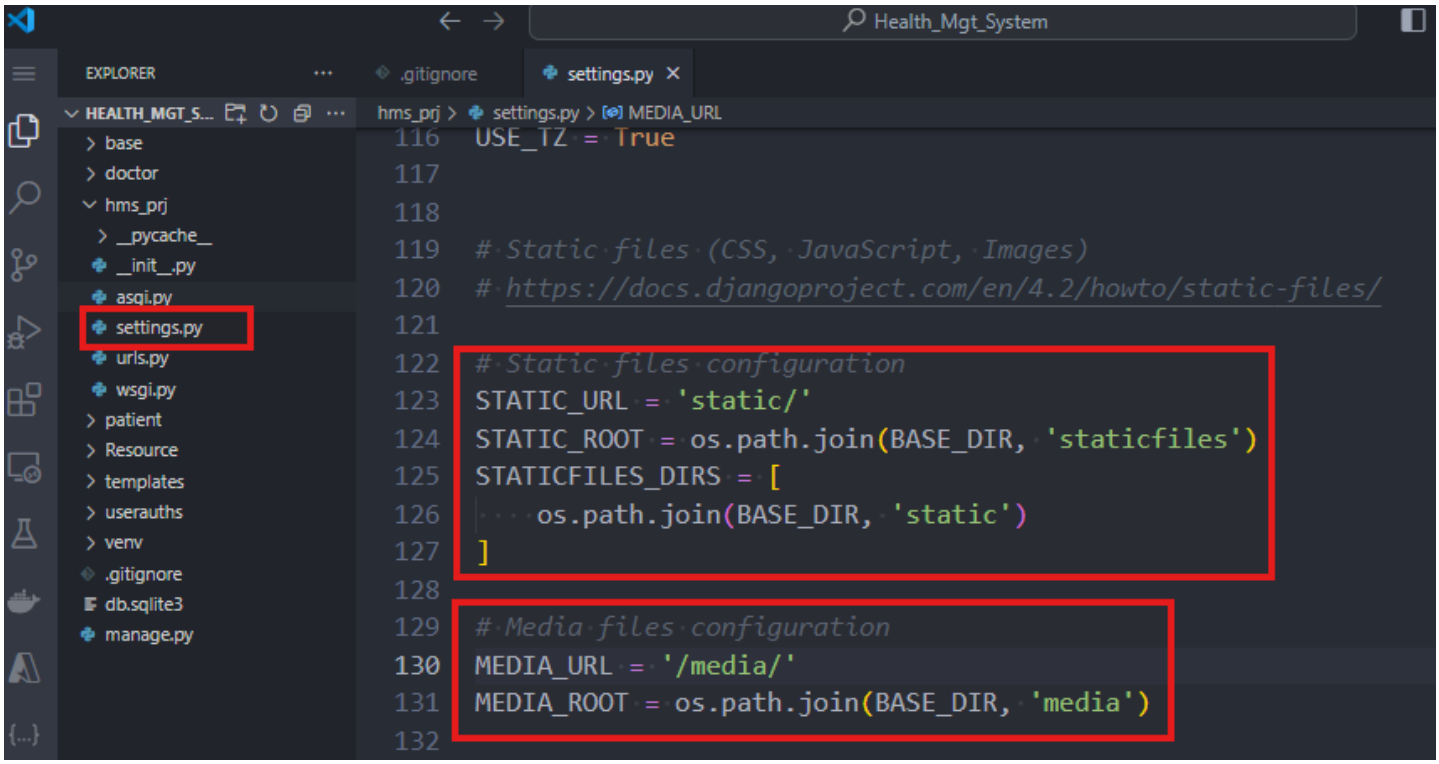

$ python manage.py startapp userauths
```

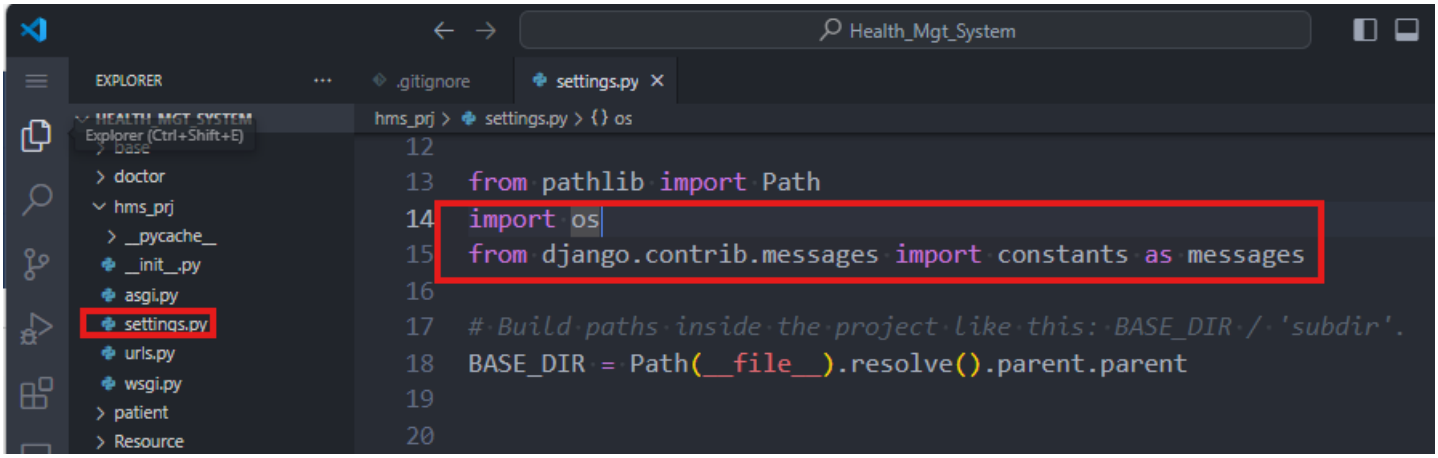

6. Create a new folder, TEMPLATES and update our SETTINGS.PY.

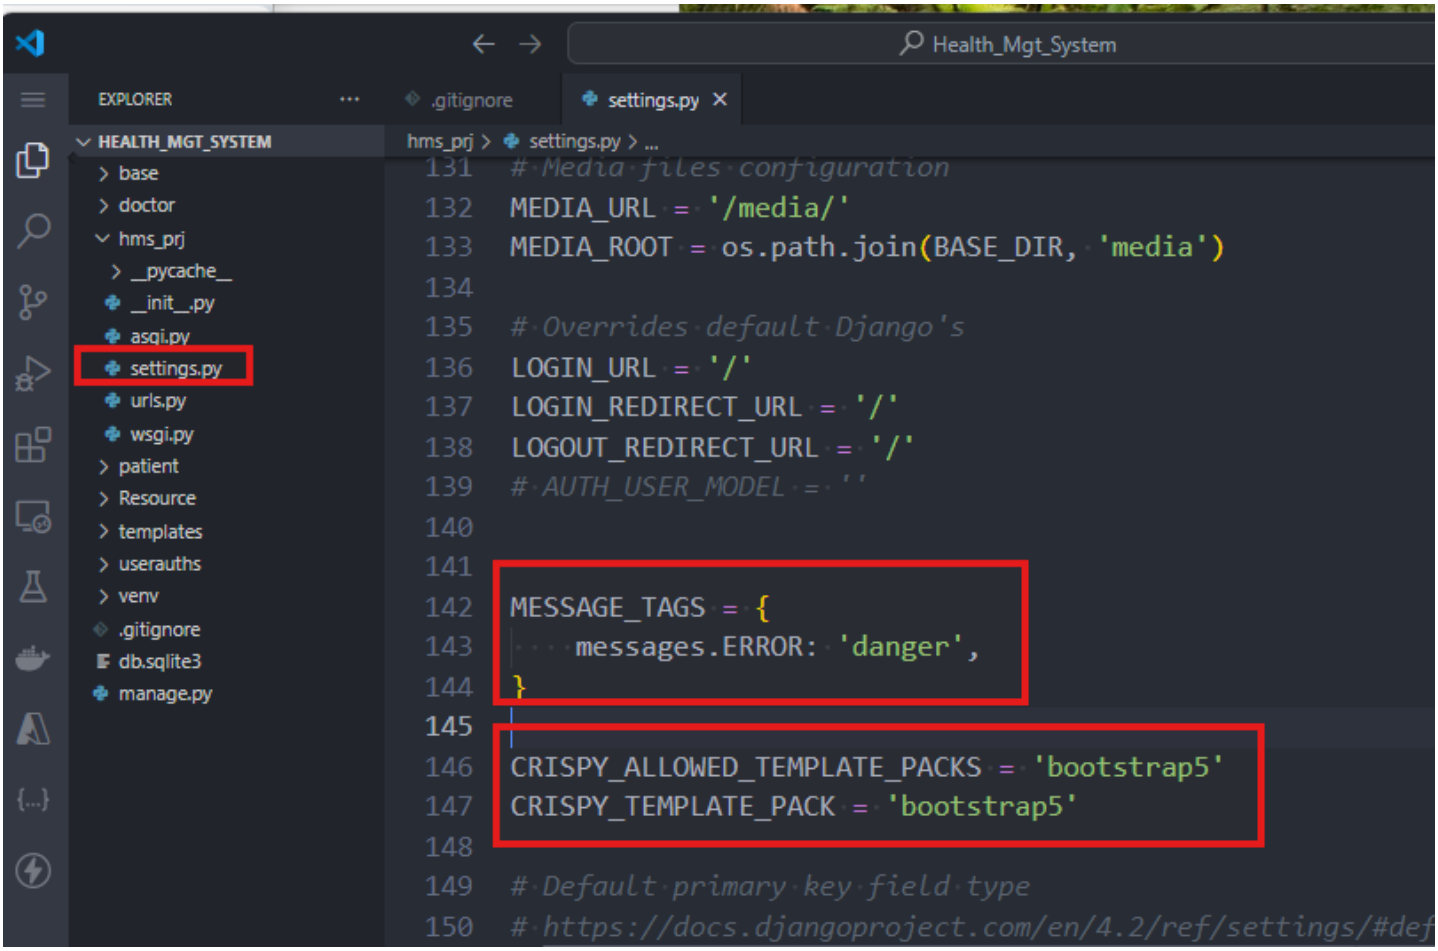

7. Set up the STATIC AND MEDIA configurations.

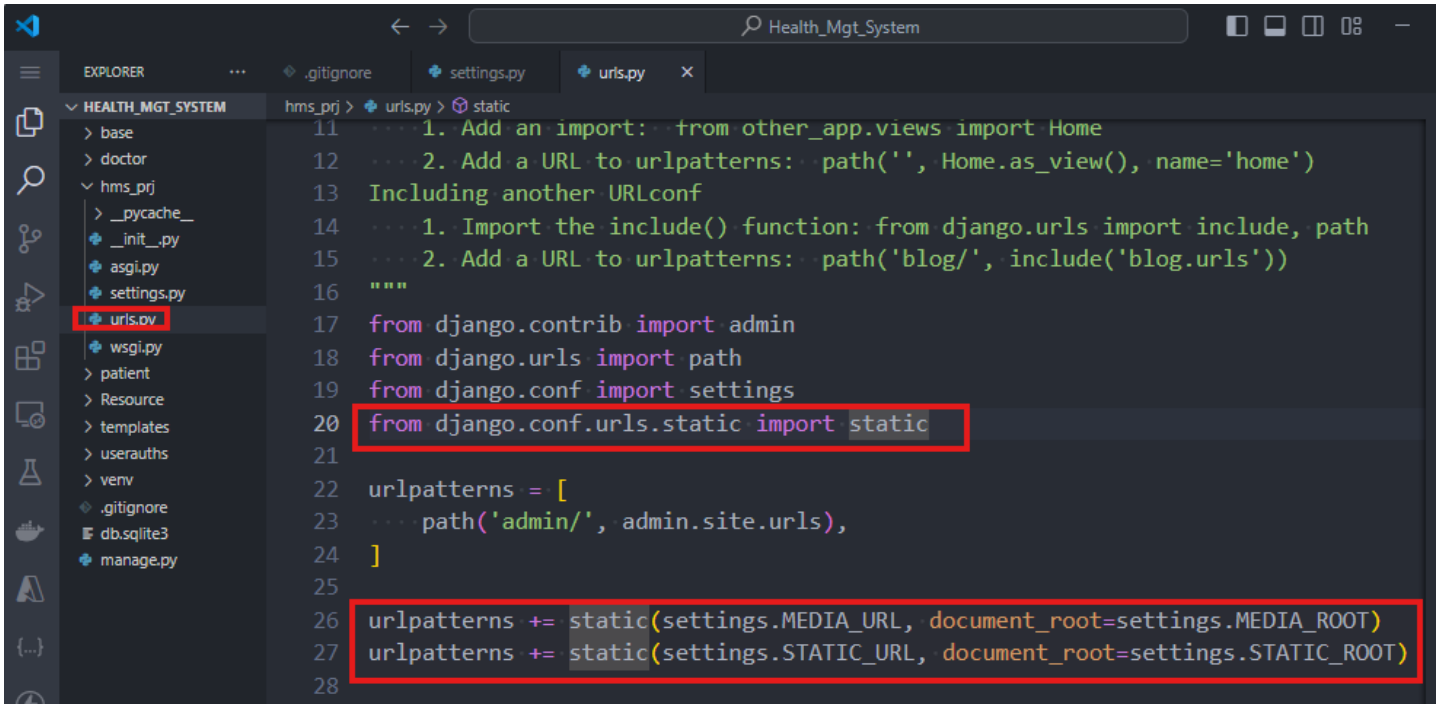

8. Update SETTINGS.PY to override default login/logout and user models:

9. For messages and forms configuration, update our SETTINGS.PY:

10. Update our project URLS.PY to include the path to our static and media files:

11. To access our ADMIN PANEL, run the migrations to see the default model.

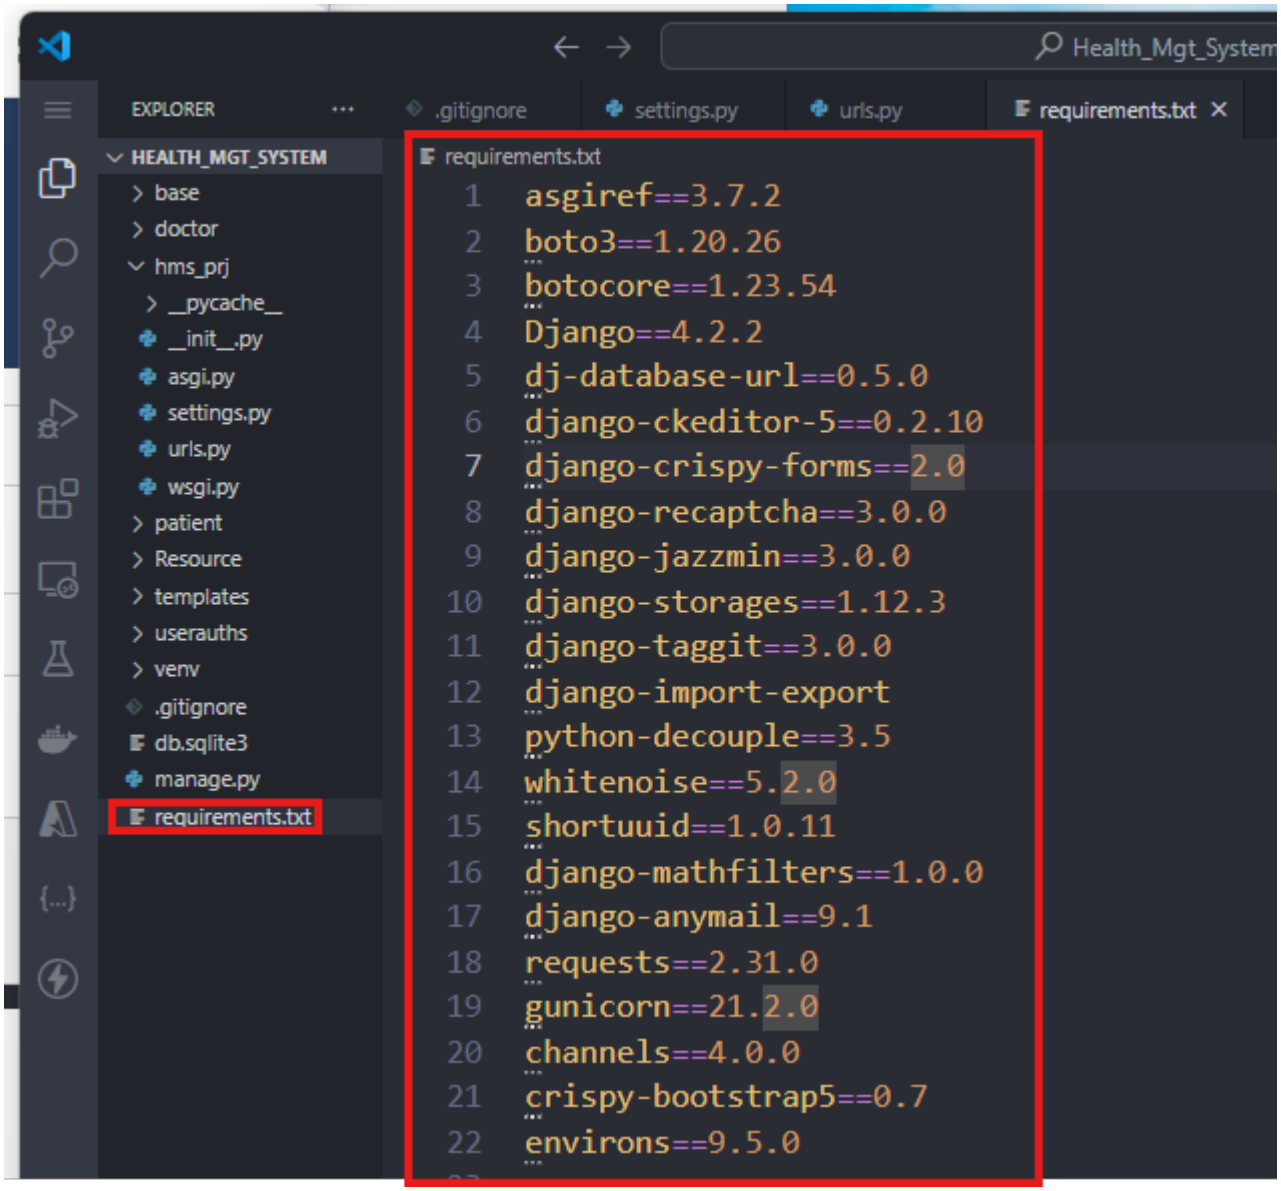

```
$ python manage.py migrate
```

12. Create your superuser

```
$  python manage.py createsuperuser
```

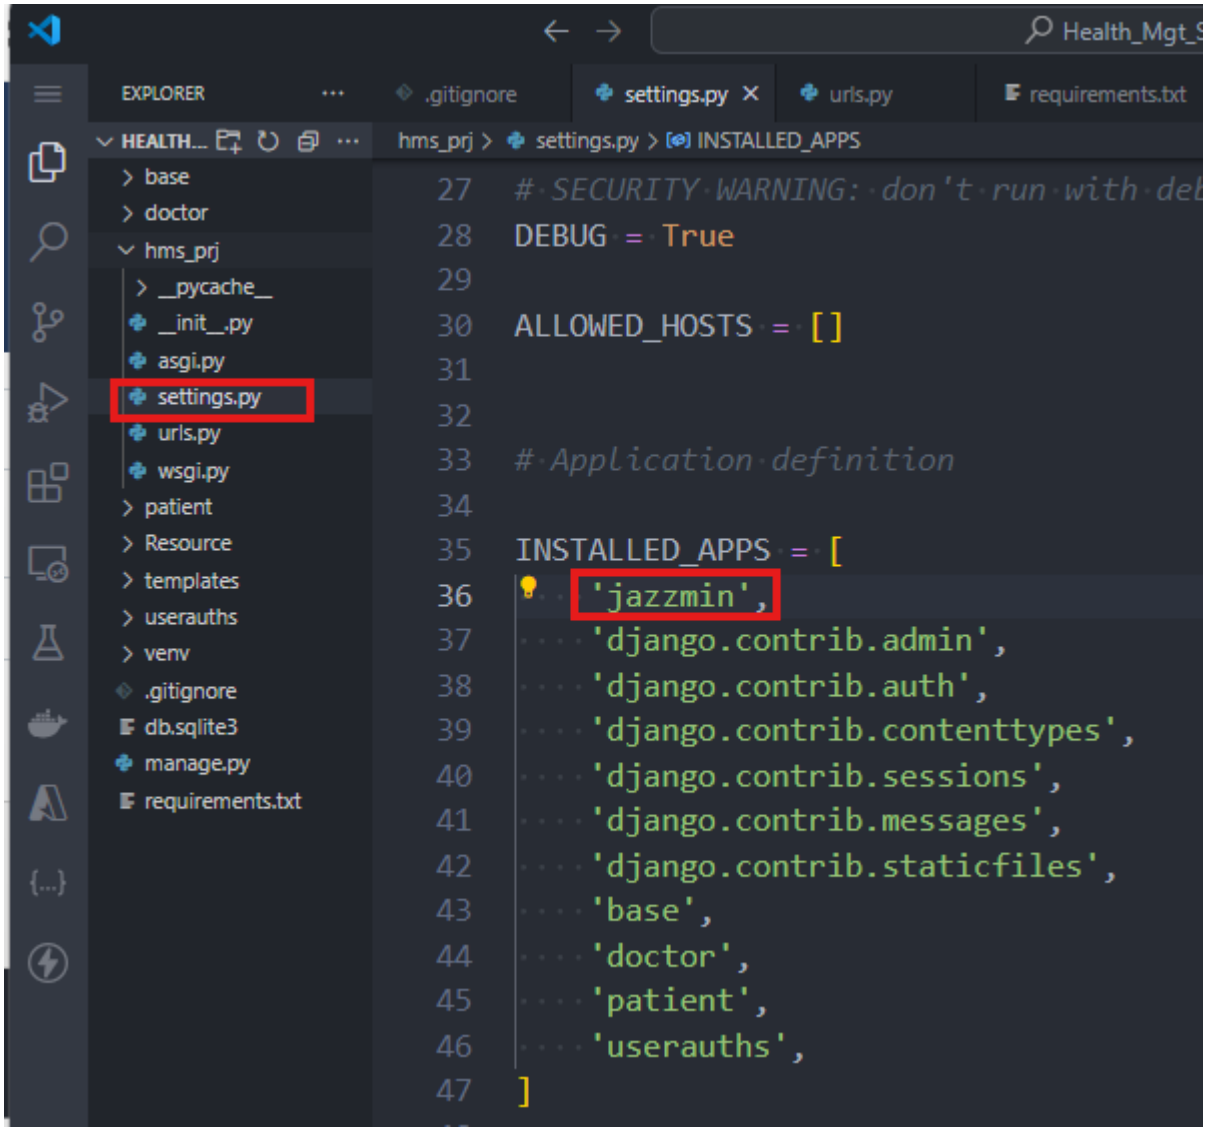

13. Install the packages from the RESOURCE folder. This will install the packages used by the instructor.

```
$ pip install -r requirements.txt
```

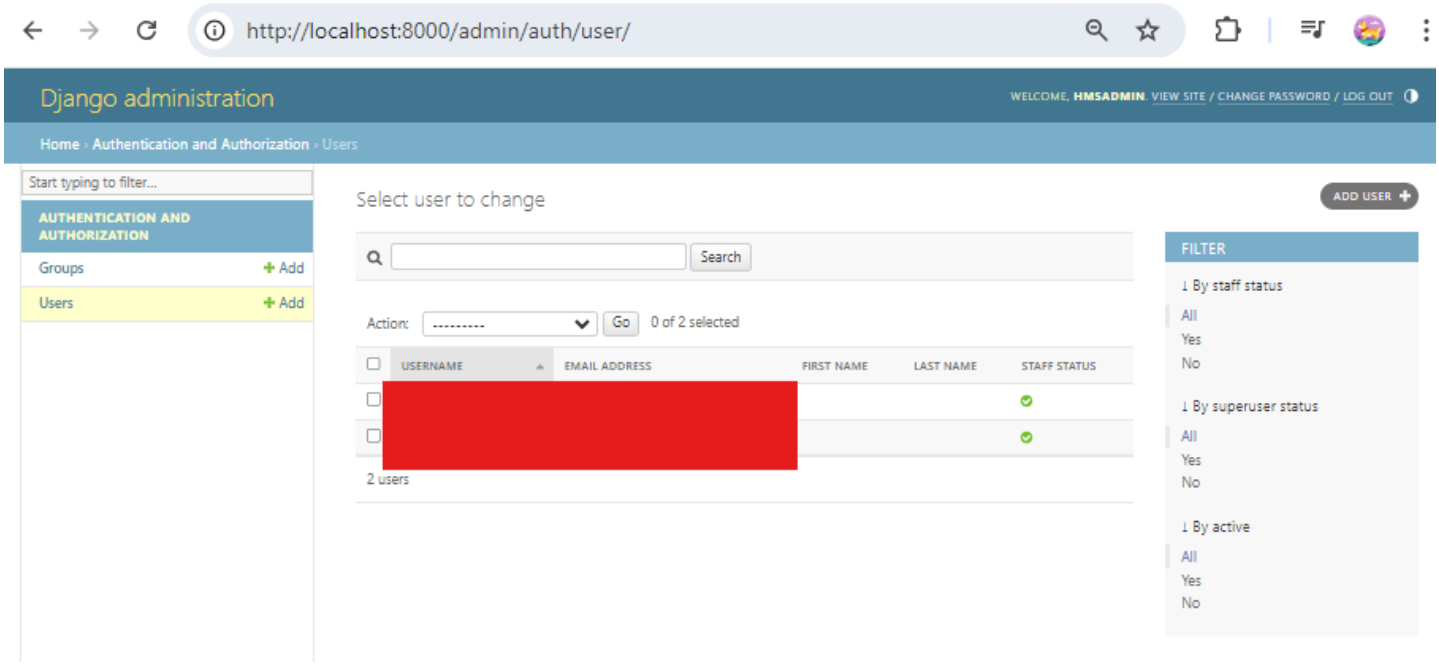

14. Instead of using default DJANGO ADMIN DASHBOARD, we use the package DJANGO JAZZMIN for a more customizable and modern look.

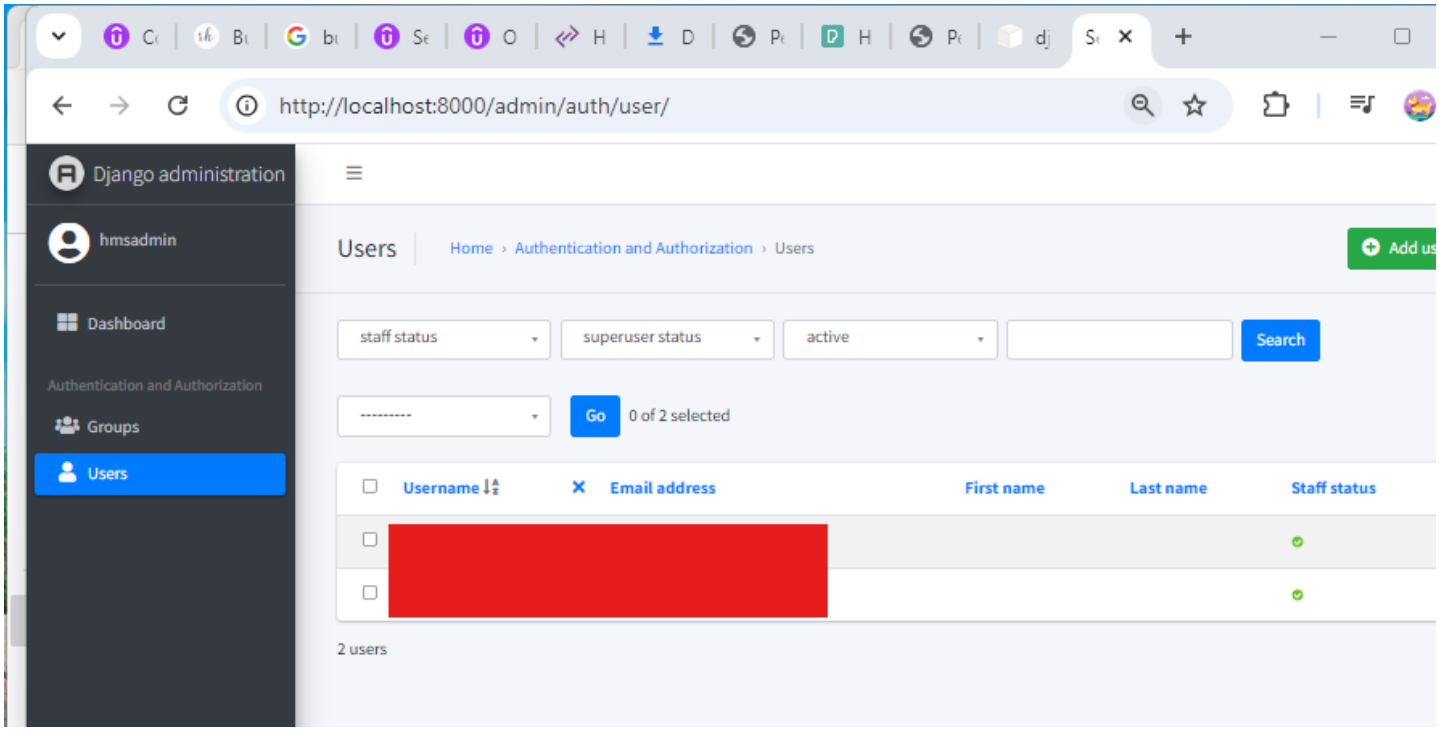

Include JAZZMIN in your INSTALLED_APPS in SETTINGS.PY

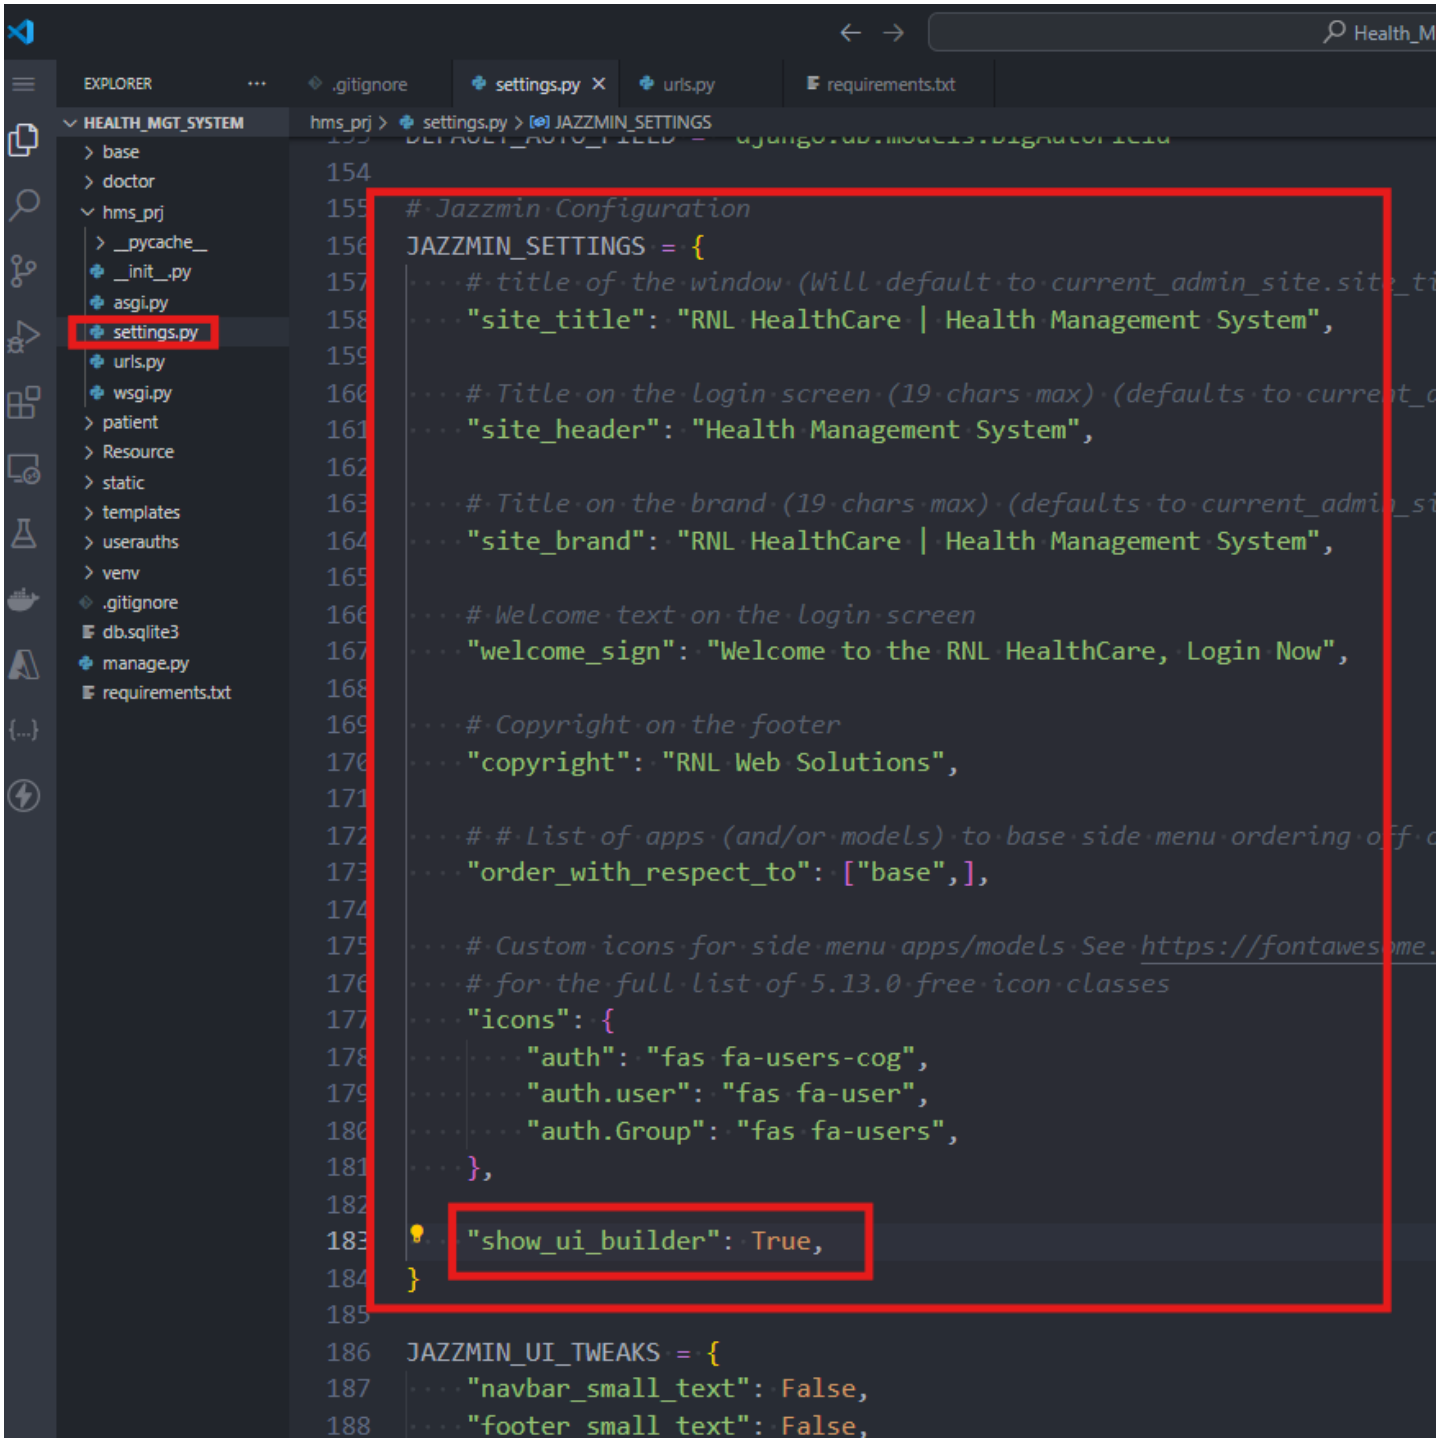

BEFORE JAZZMIN:

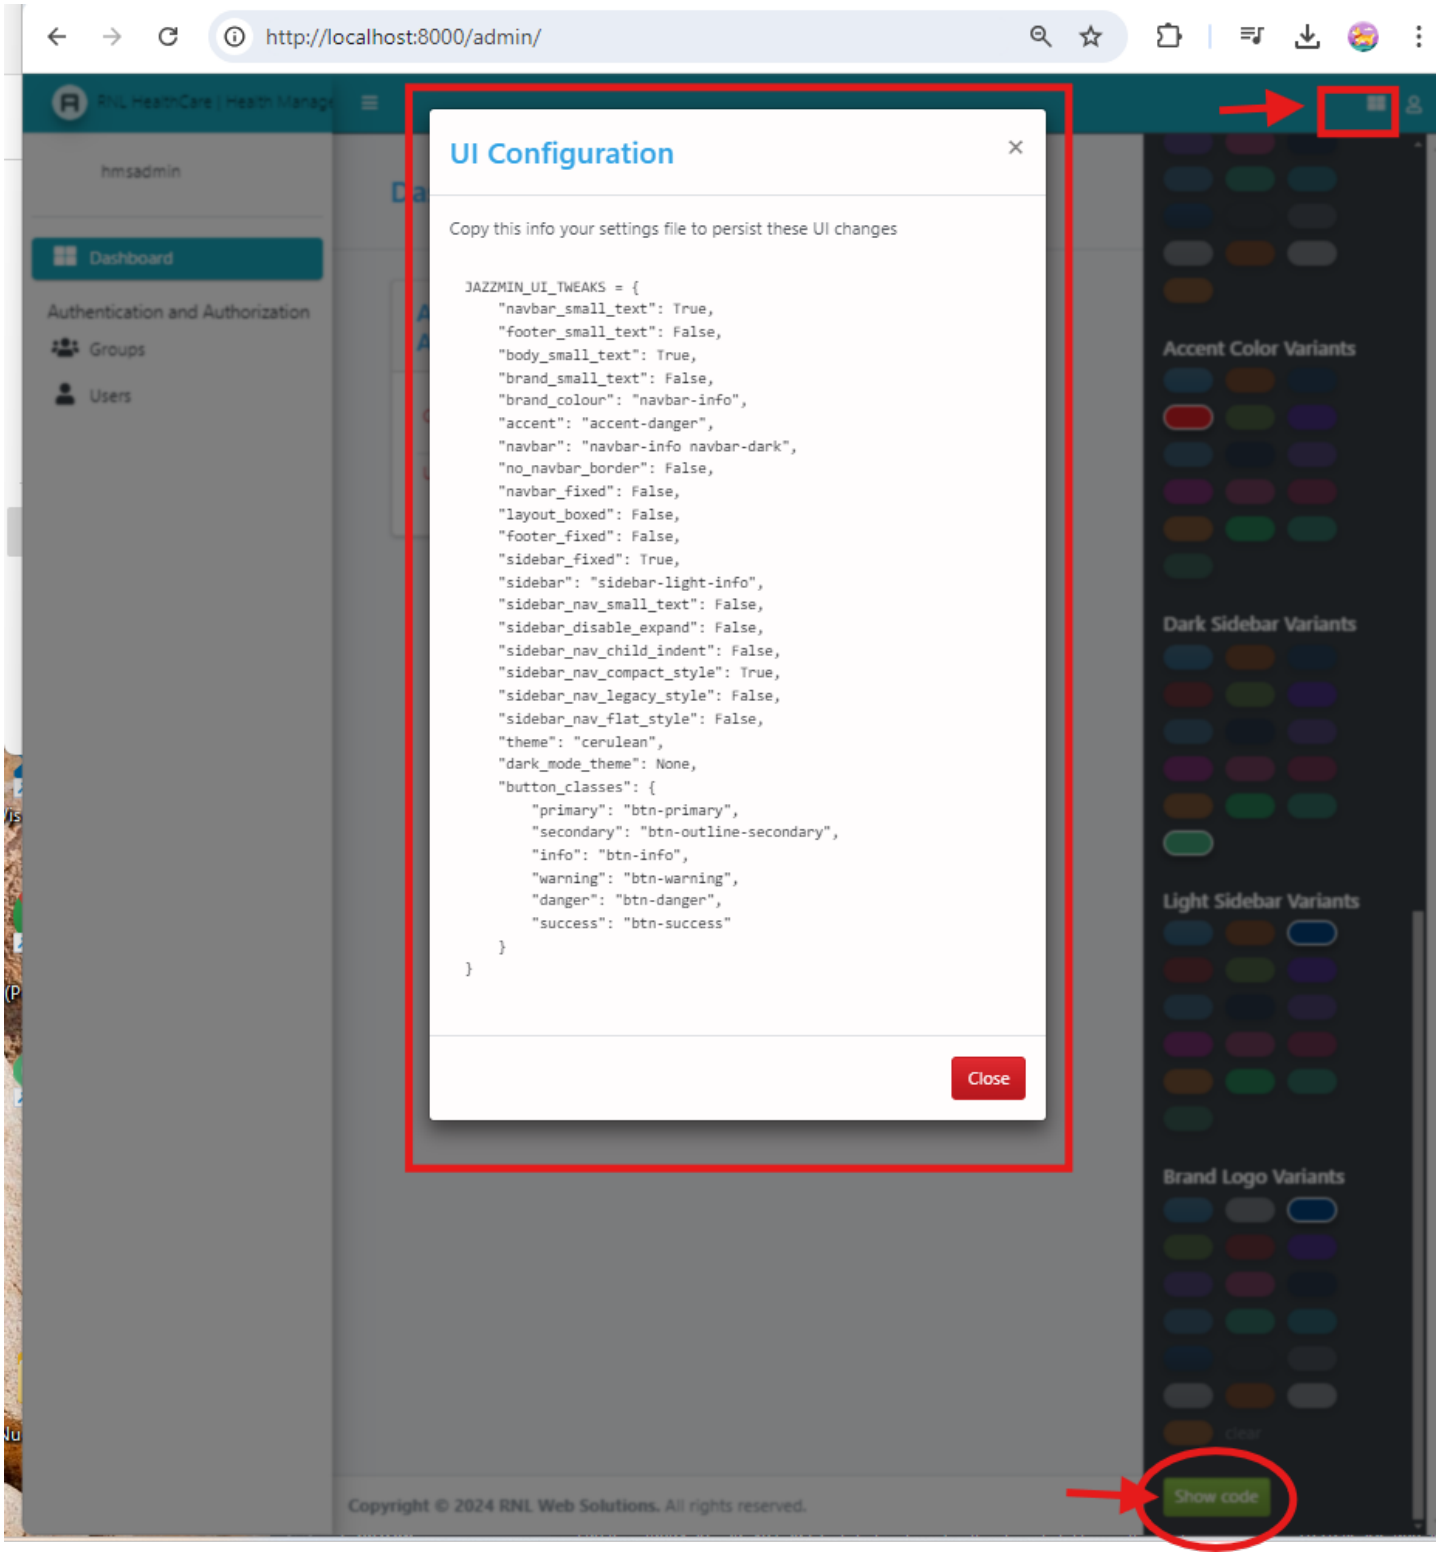

AFTER JAZZMIN:

15. To add a more customizable look to the admin panel, add in the SETTINGS.PY the JAZZMIN_SETTINGS. Documentation here.

16. Reload your page and in the admin dashboard, you will see the UI builder, you need to copy this code and add this as JAZZMIN_TWEAKS. COPY THIS CODE INTO YOUR SETTINGS.PY.
