Topic: 13. Nested Serializers for Related Models Part 2

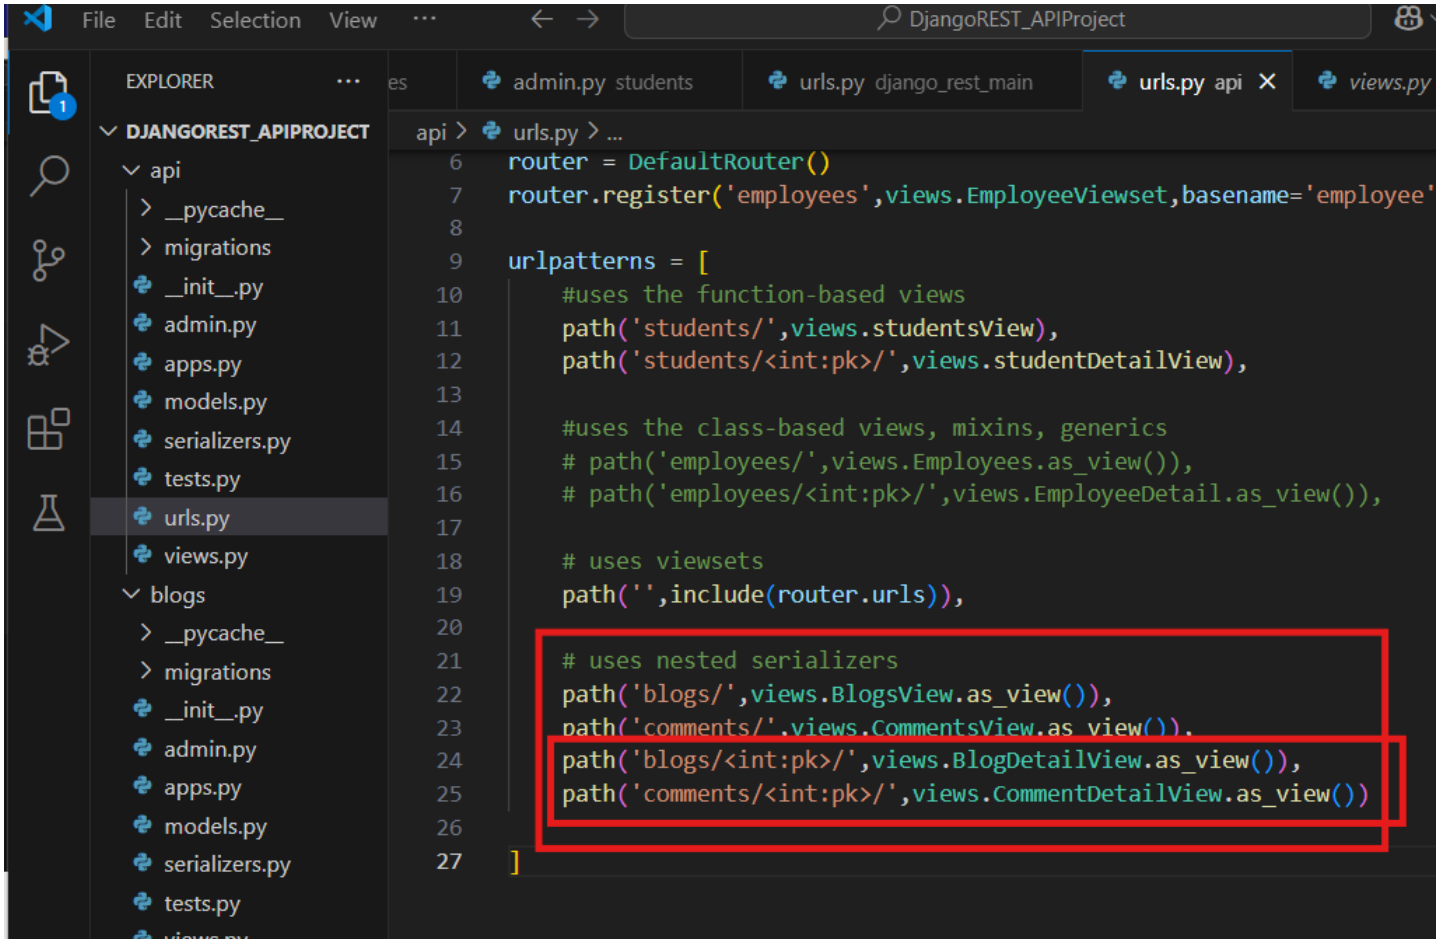

Speaker: Personal | Notebook: API Development using Django Framework

---

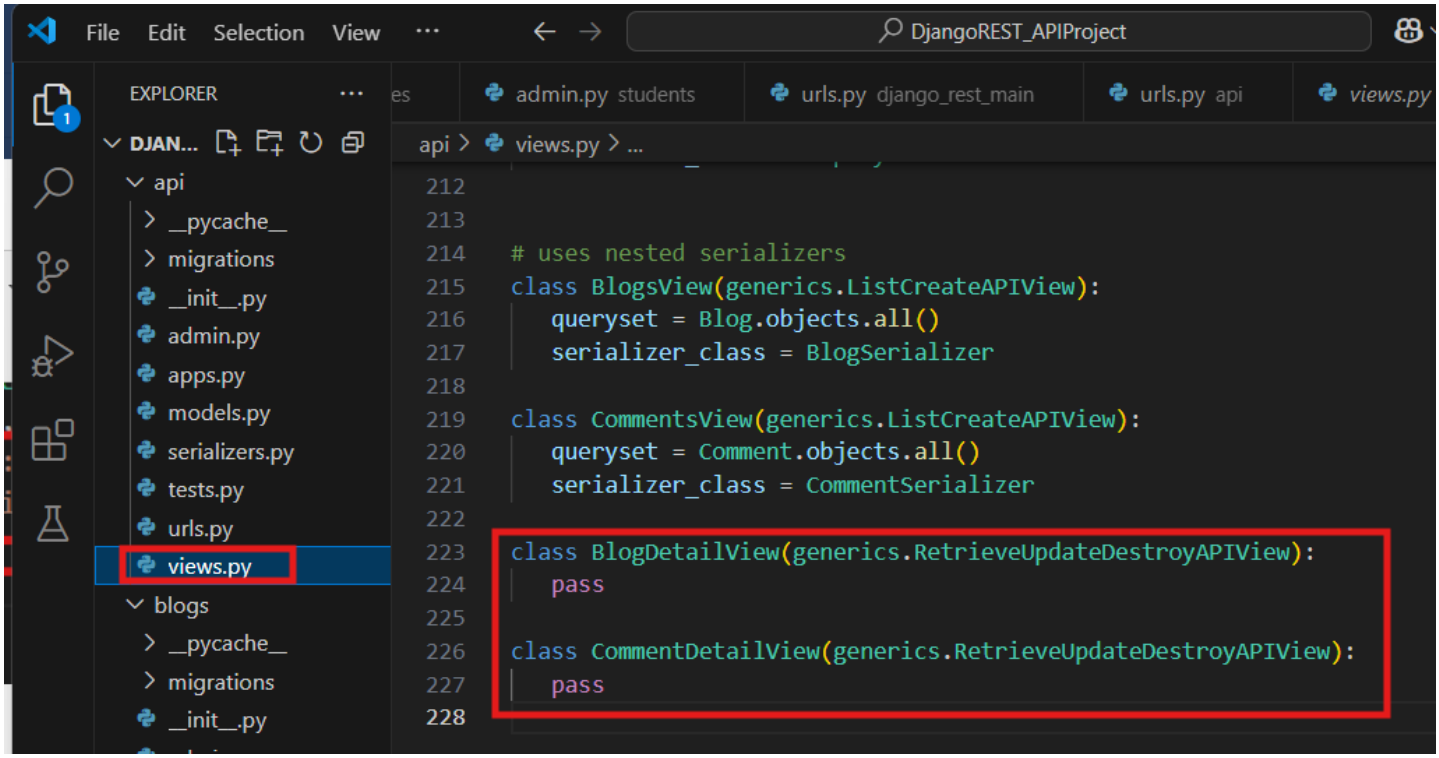

In this post, we use the primary key to allow other CRUD operations.

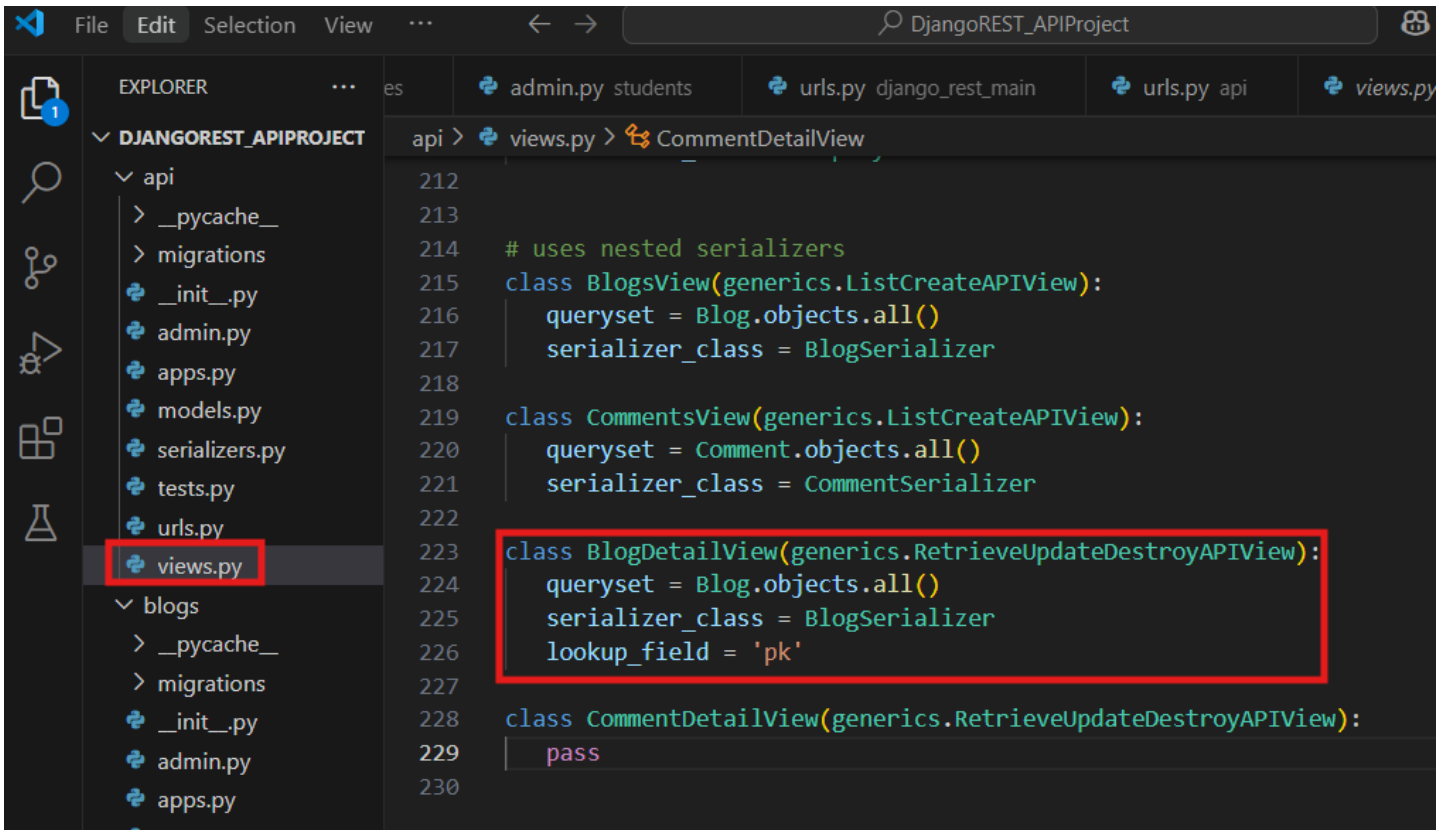

1. So we update the API\URLS.PY to include the PK-based operations.

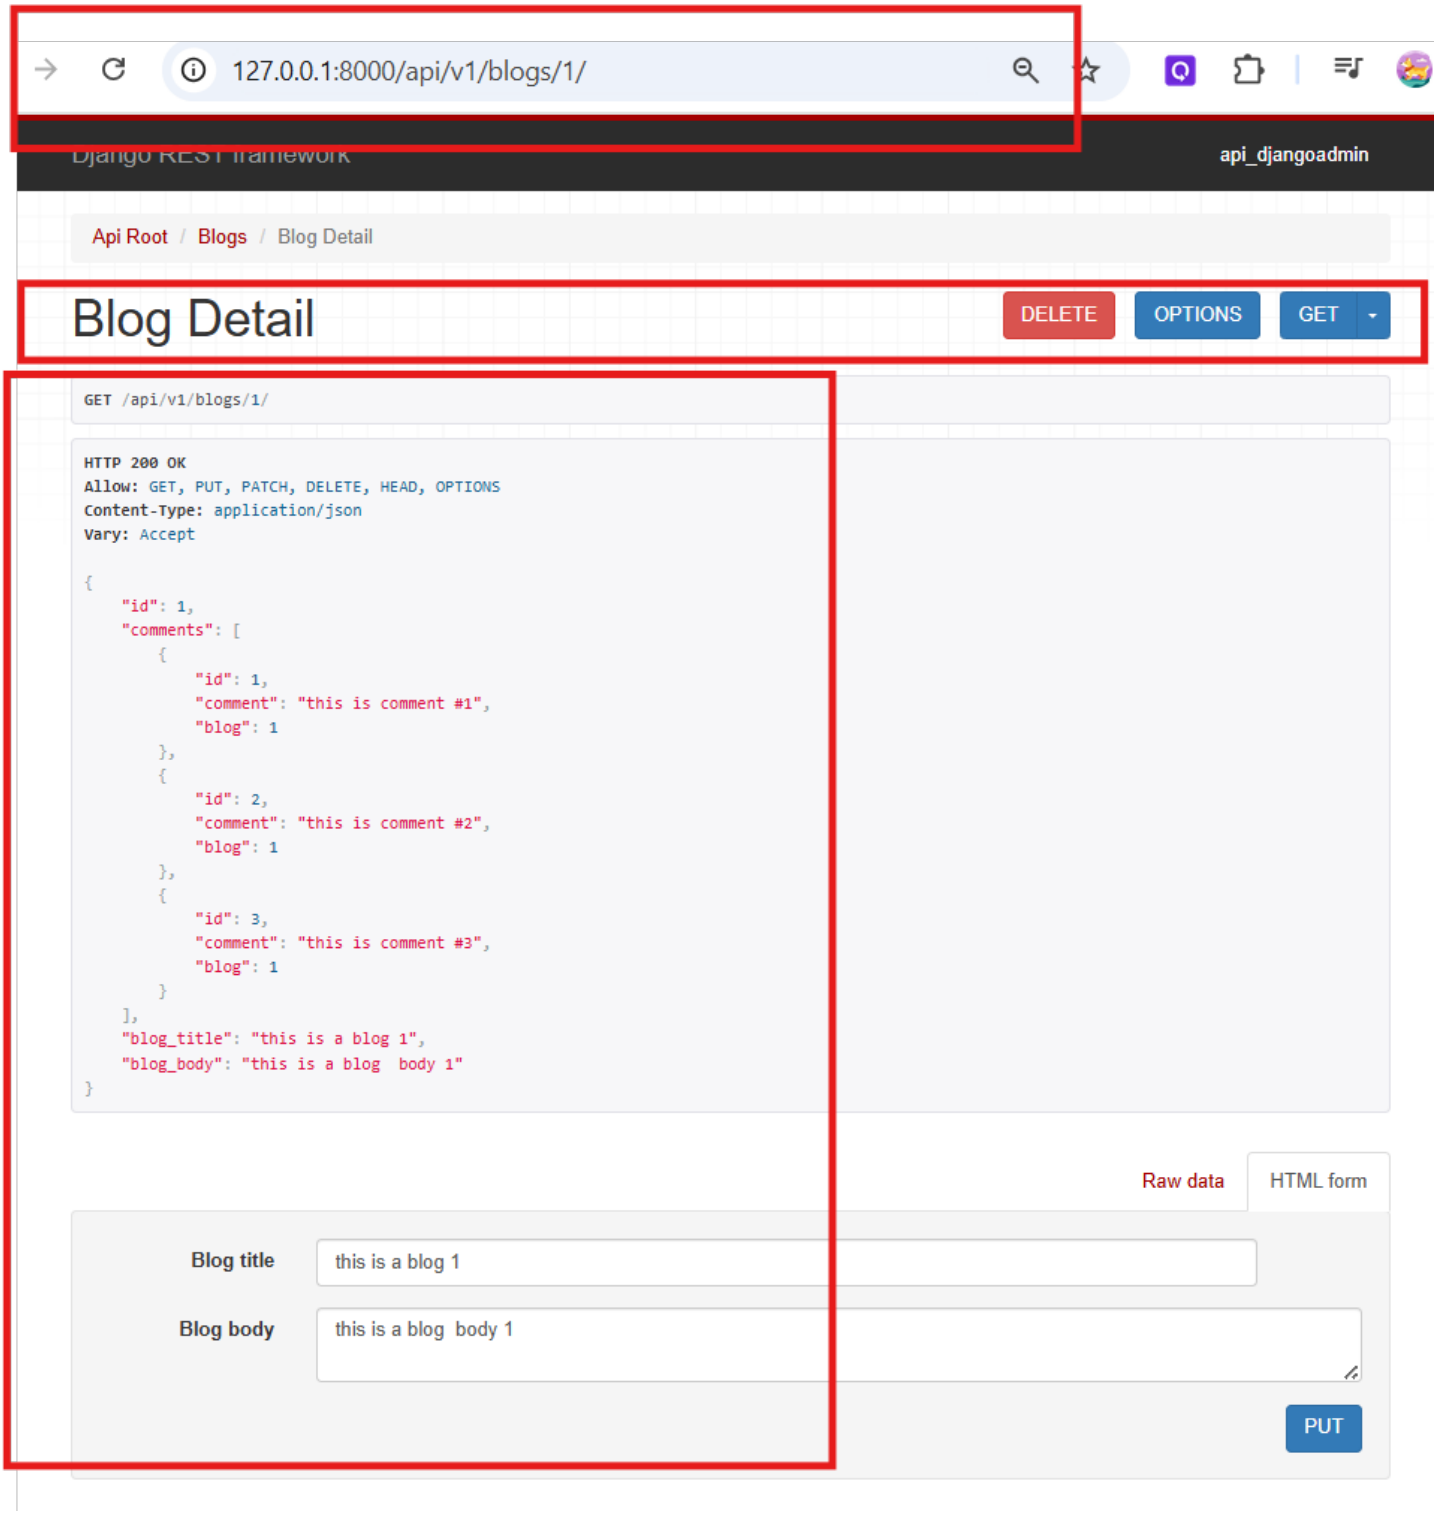

2. Update the API\VIEWS.PY

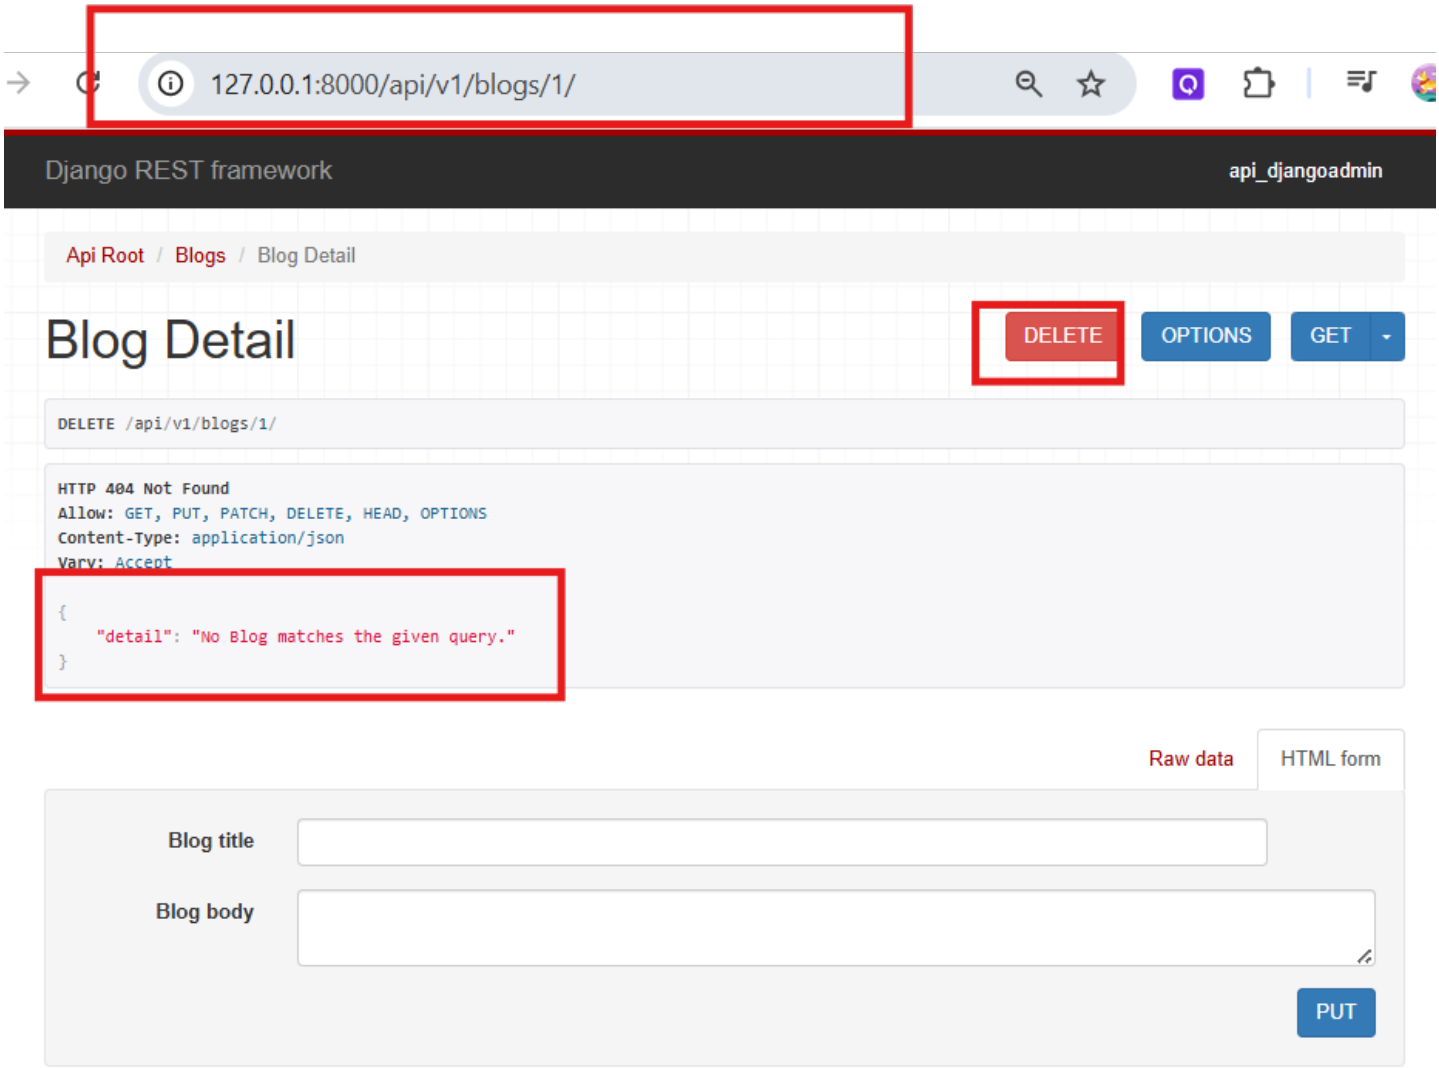

Then update as:

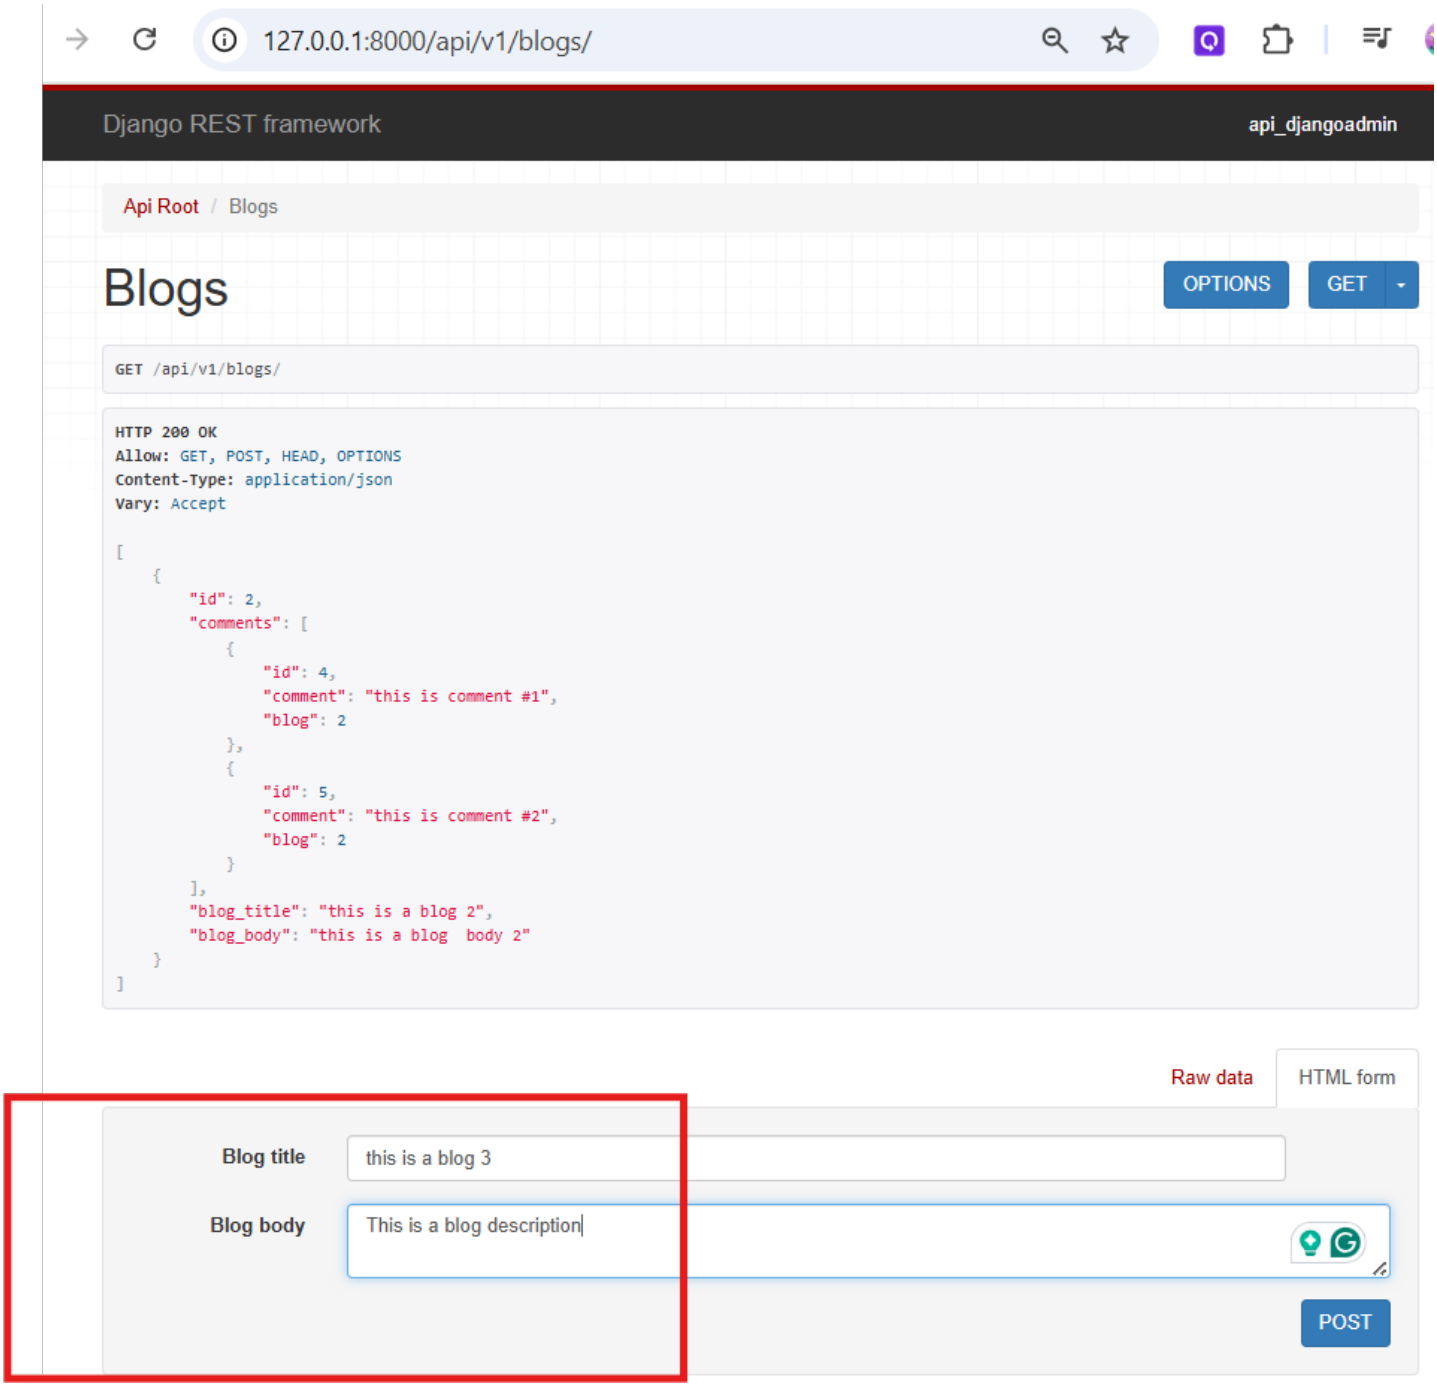

3. Now view the specific path of blog post # 1:

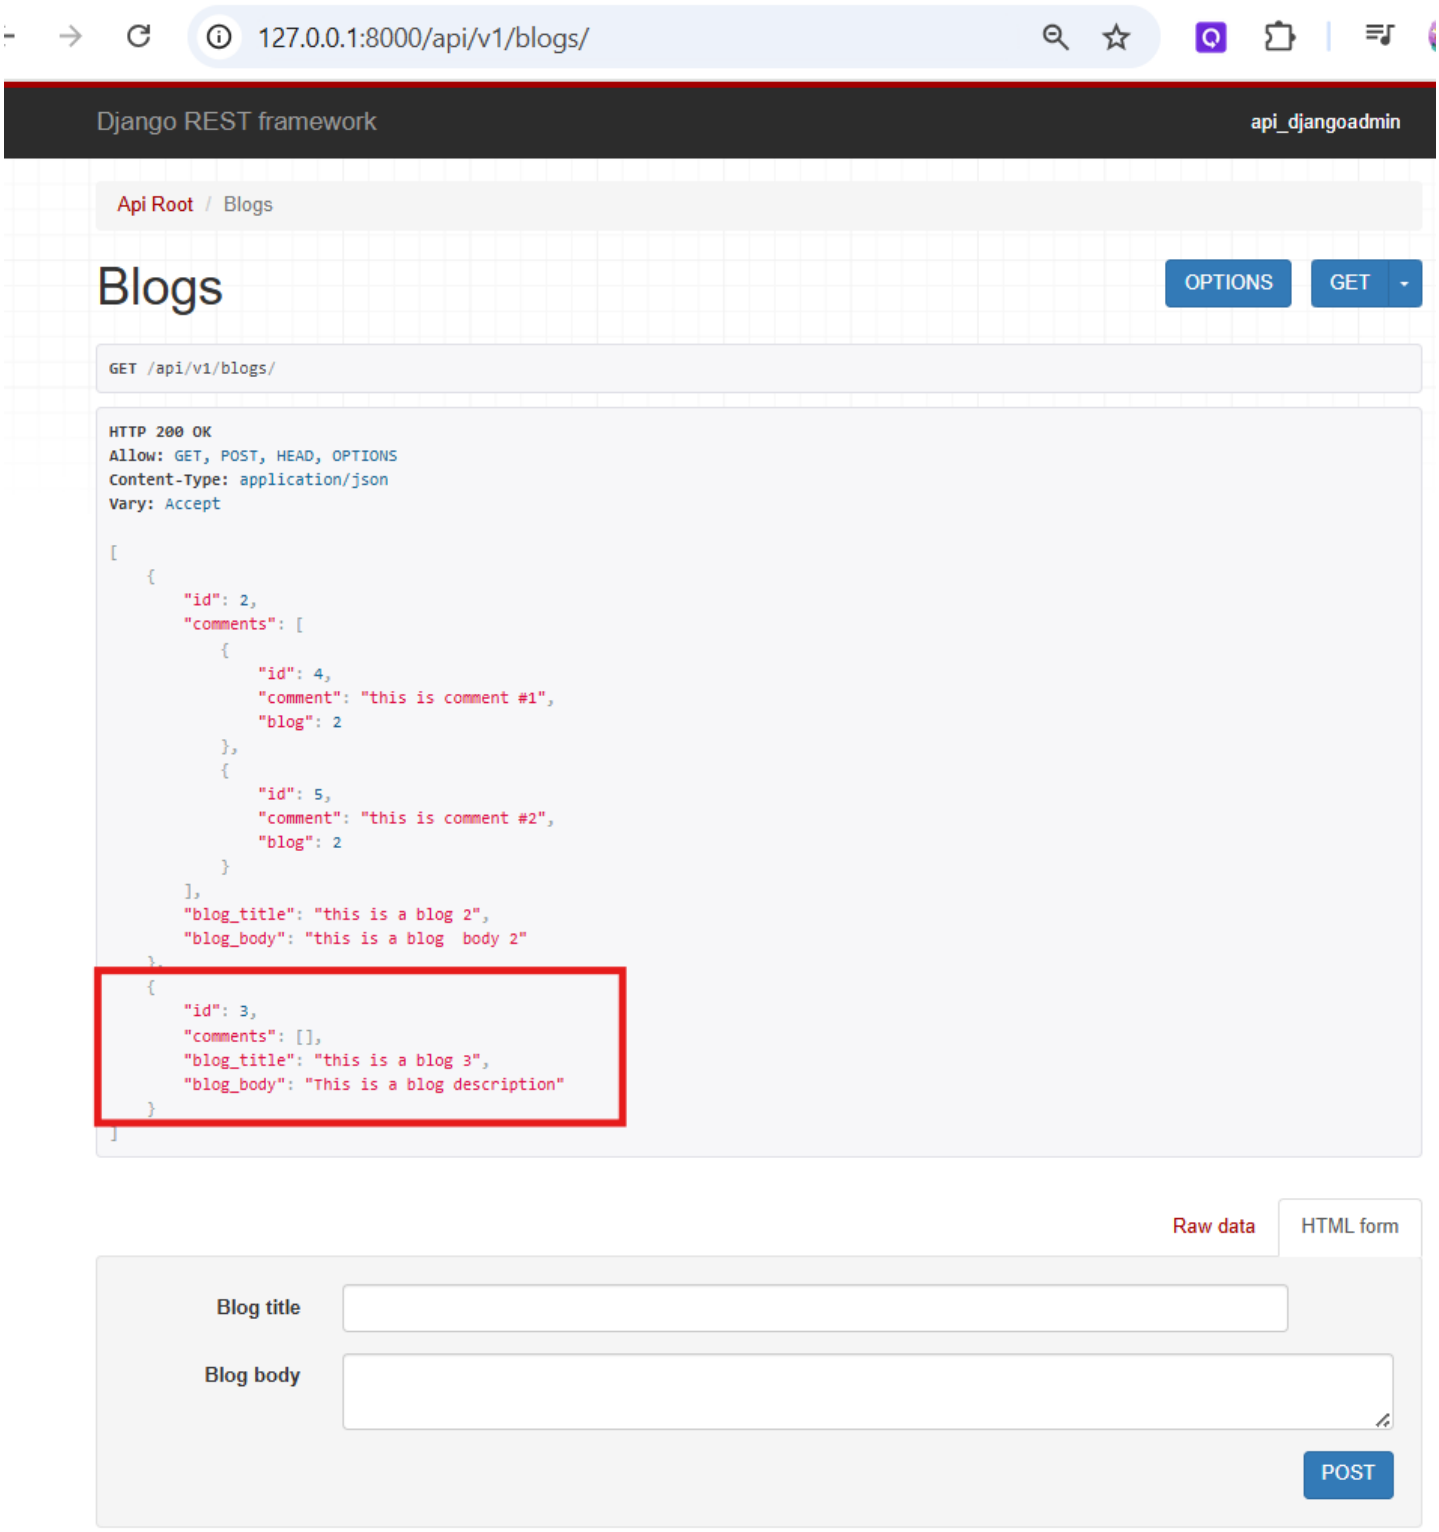

Now, you can update and delete this record.

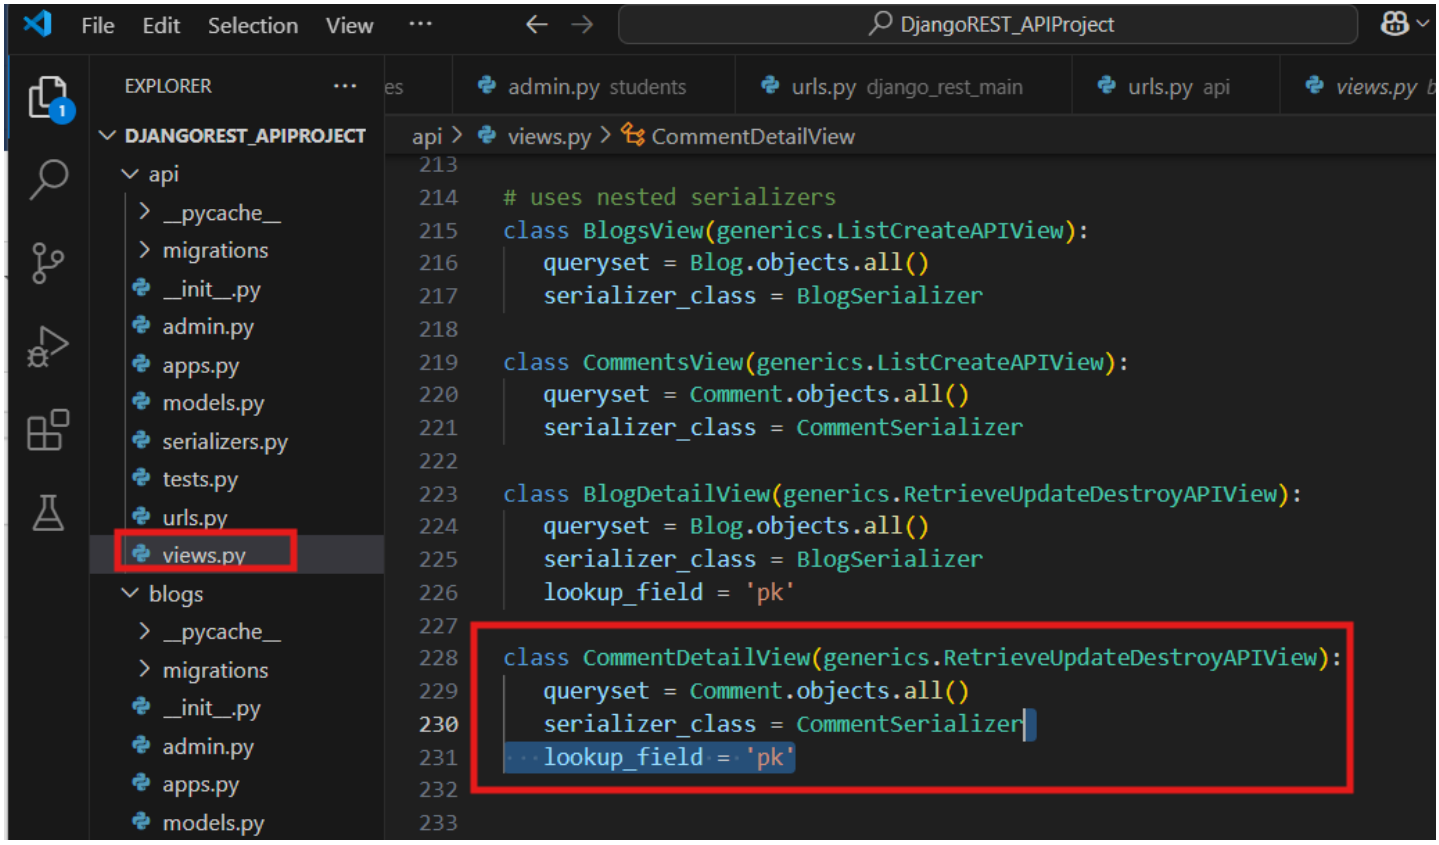

You can also add a new post here:

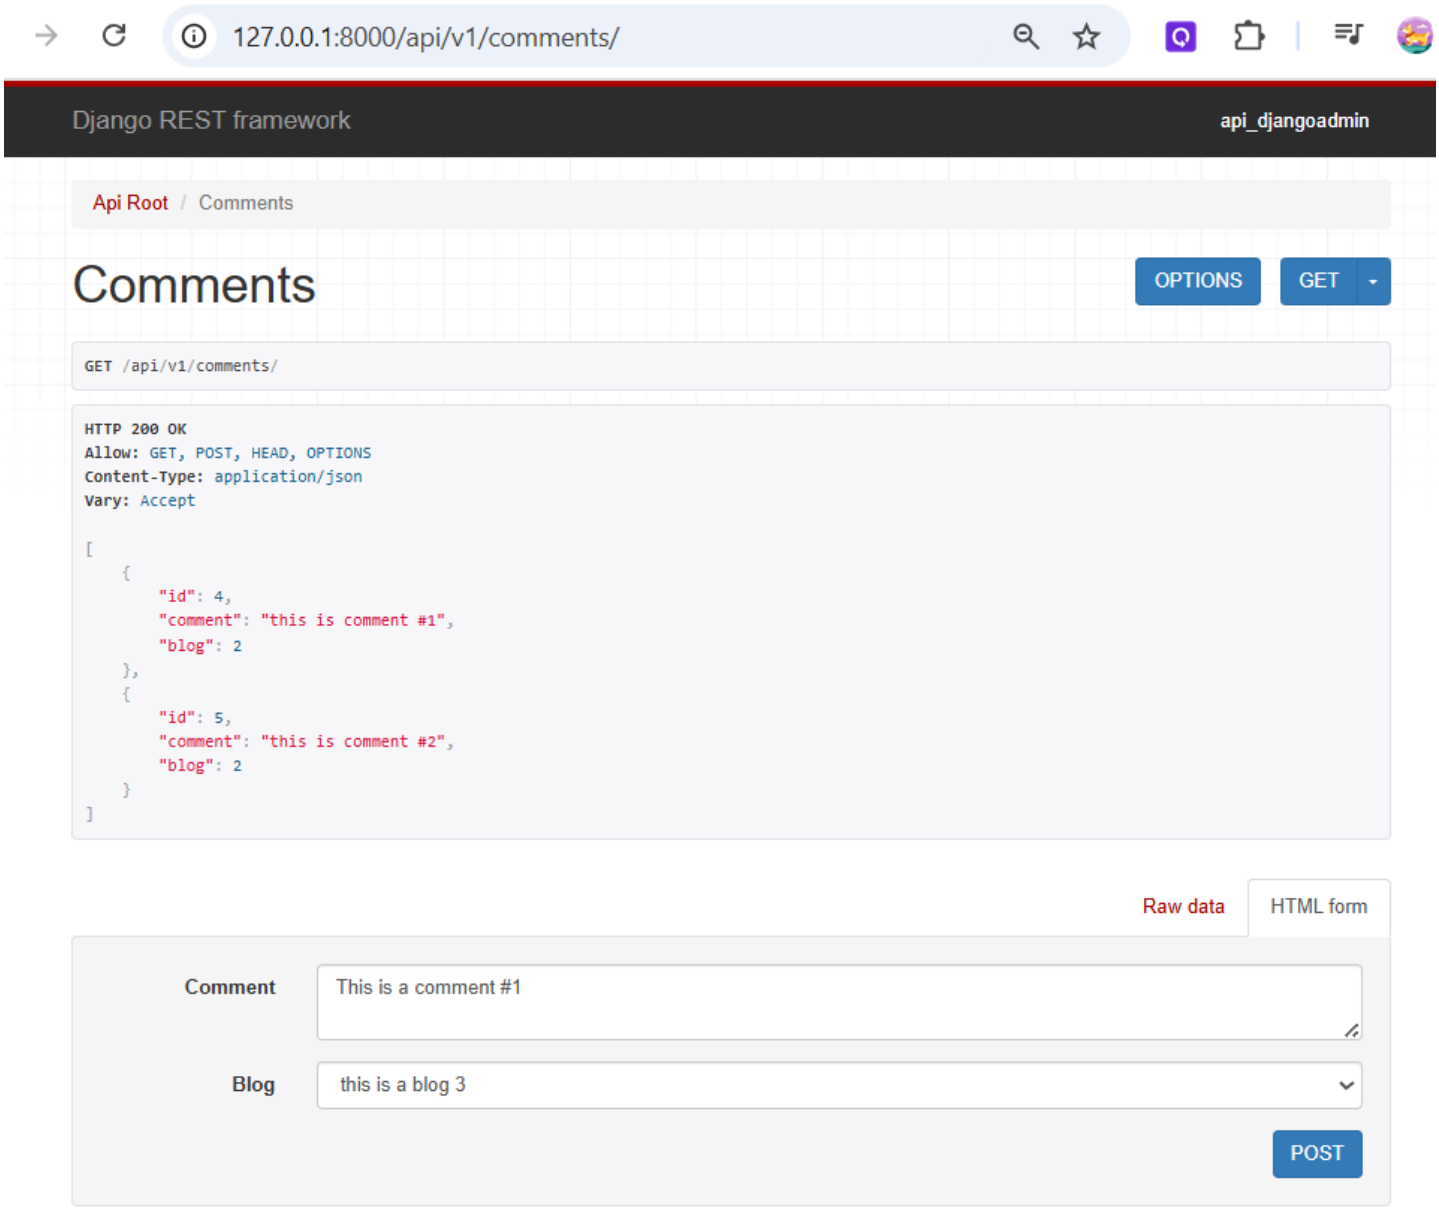

Then you can reload your page:

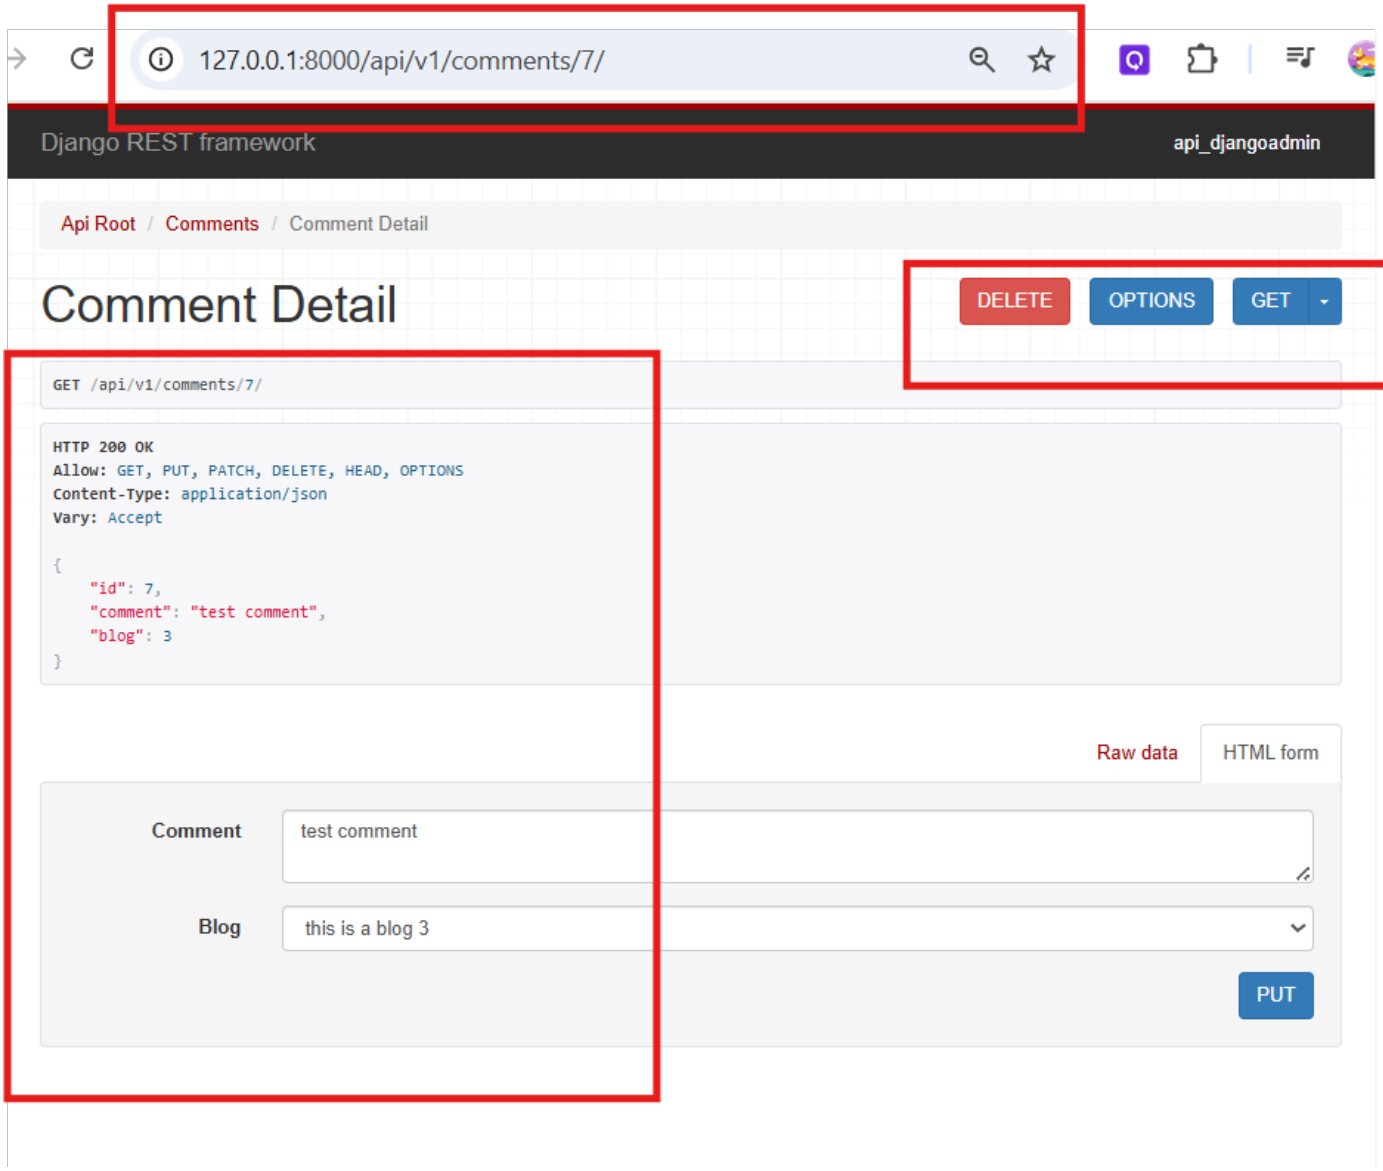

4. To allow CRUD operations on `Comment` model, then we update the `class CommentDetailView`:

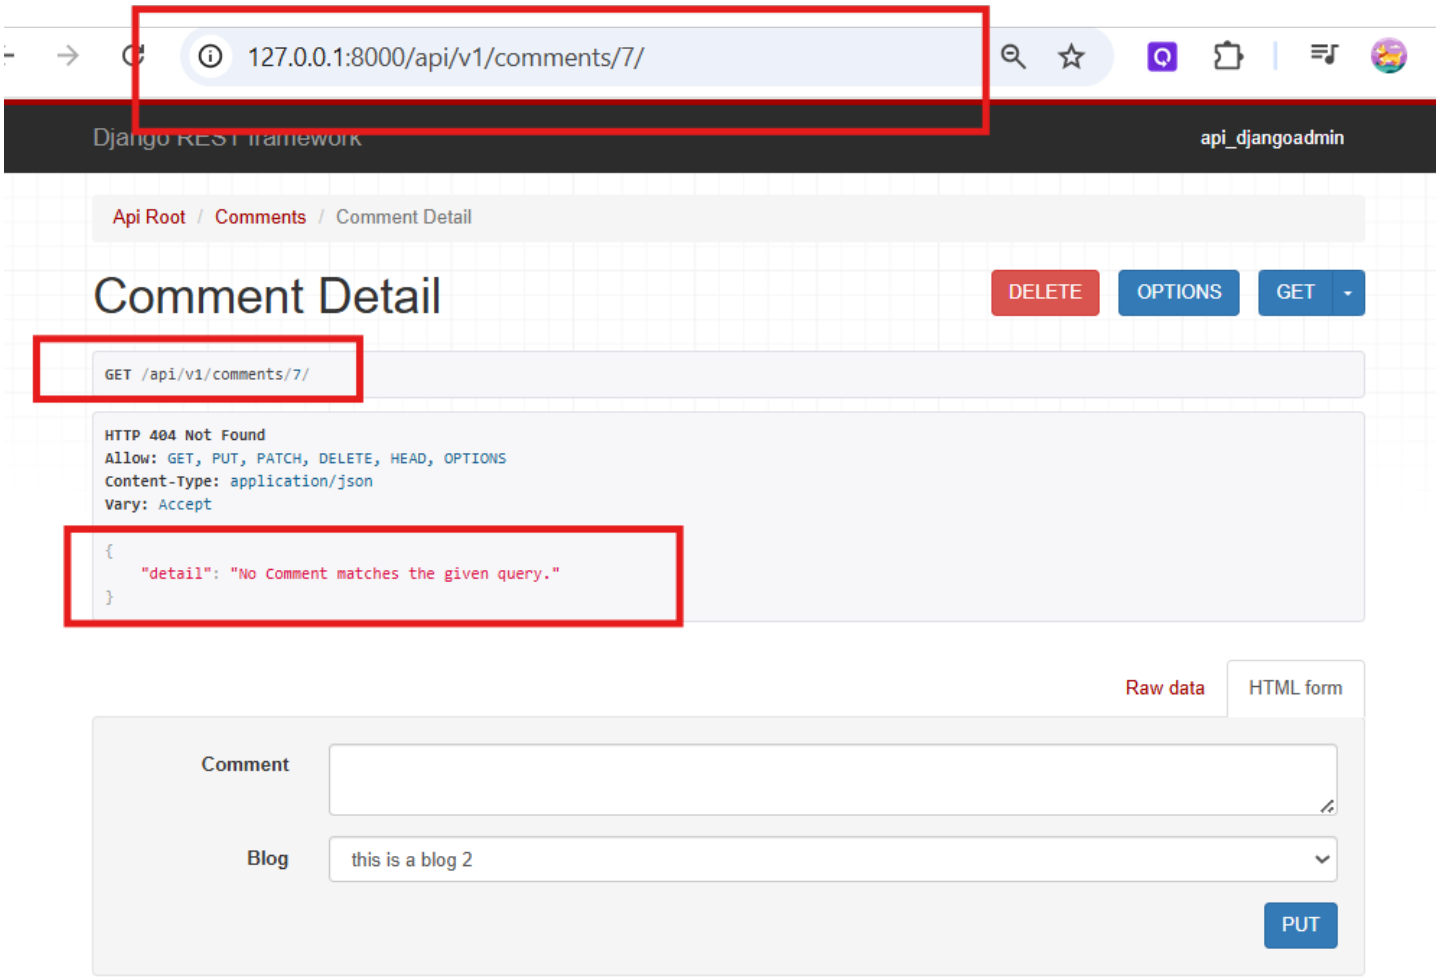

5. To view the COMMENTS path:

6. To delete the specific comment:

7. View the deleted record:

8.
