Topic: 16. DRF Searching

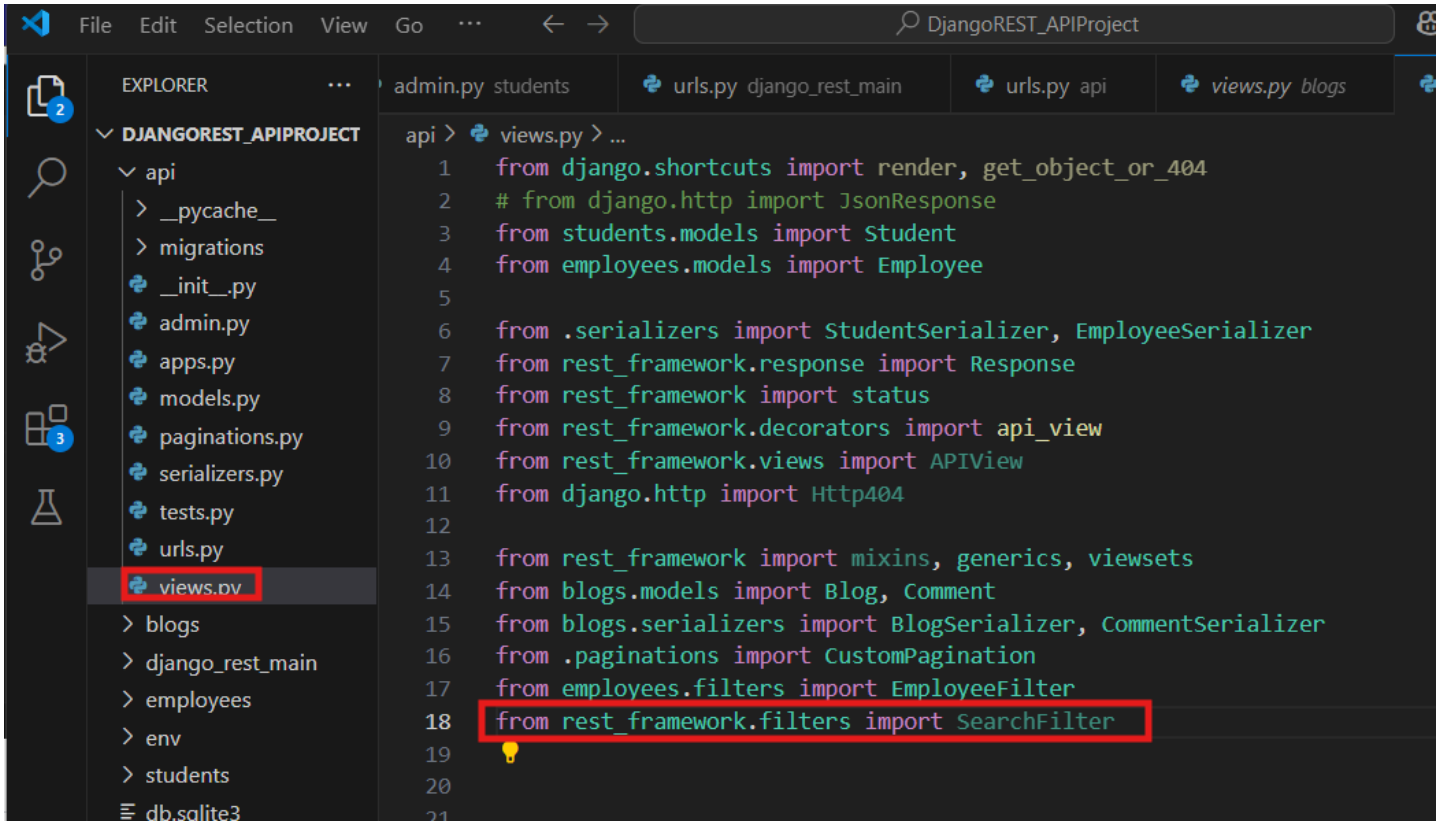

Speaker: Personal | Notebook: API Development using Django Framework

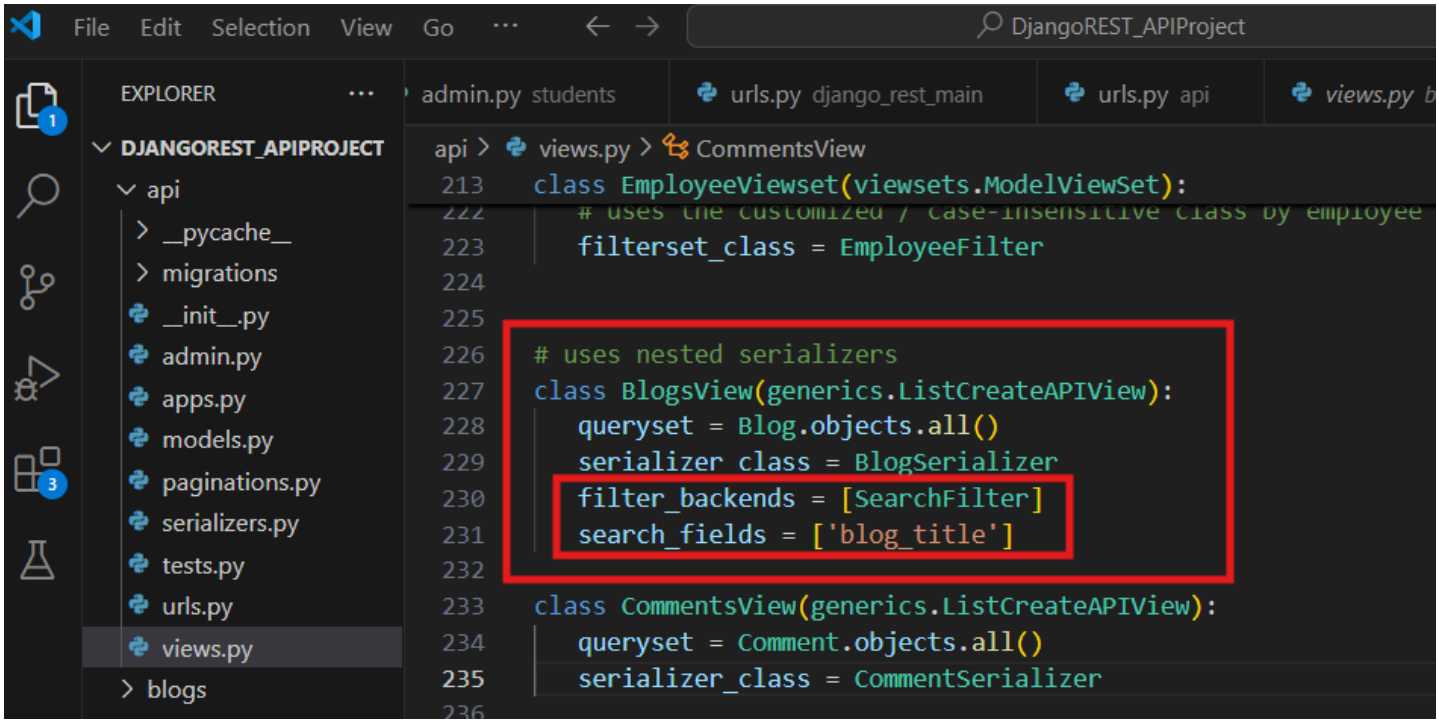

---

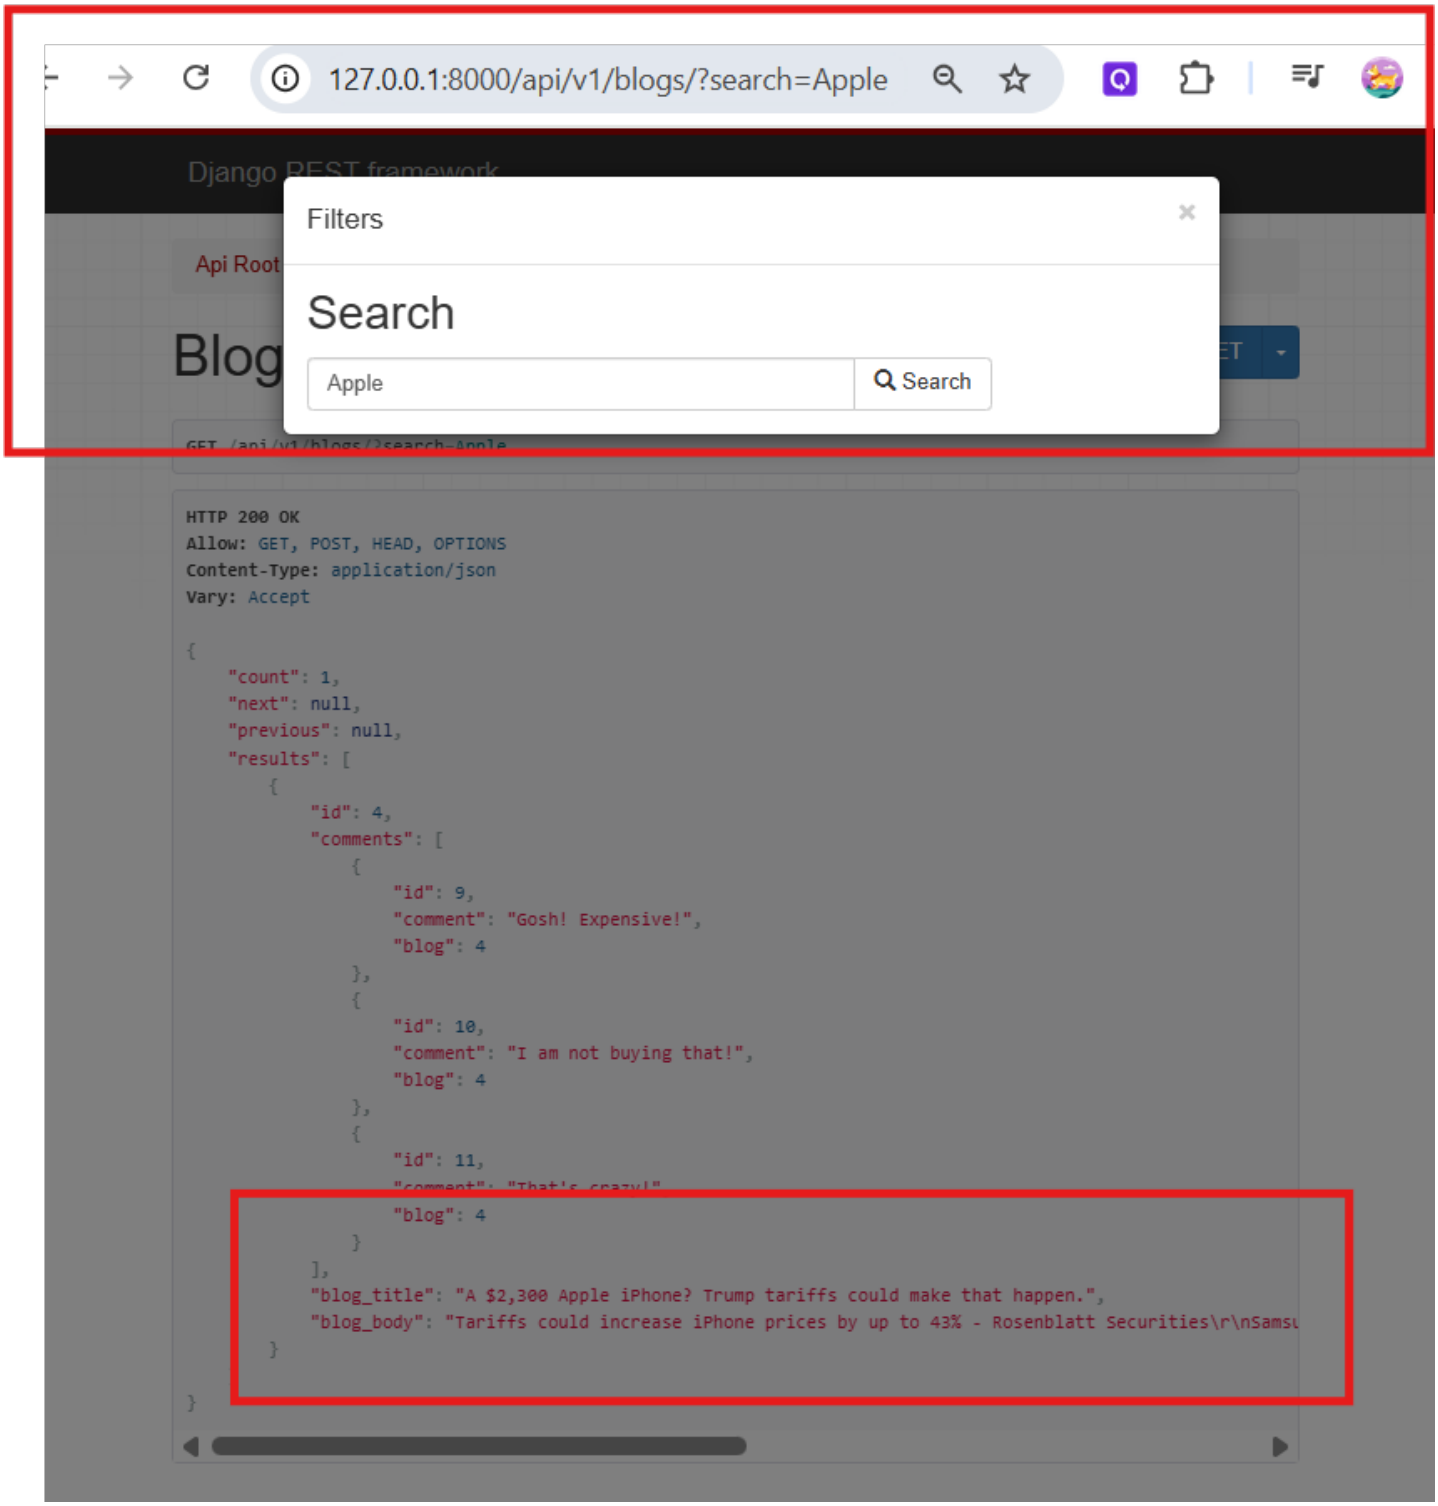

We can search through the database fields like BLOGS' title or comments.

1. Go to API\VIEWS.PY:

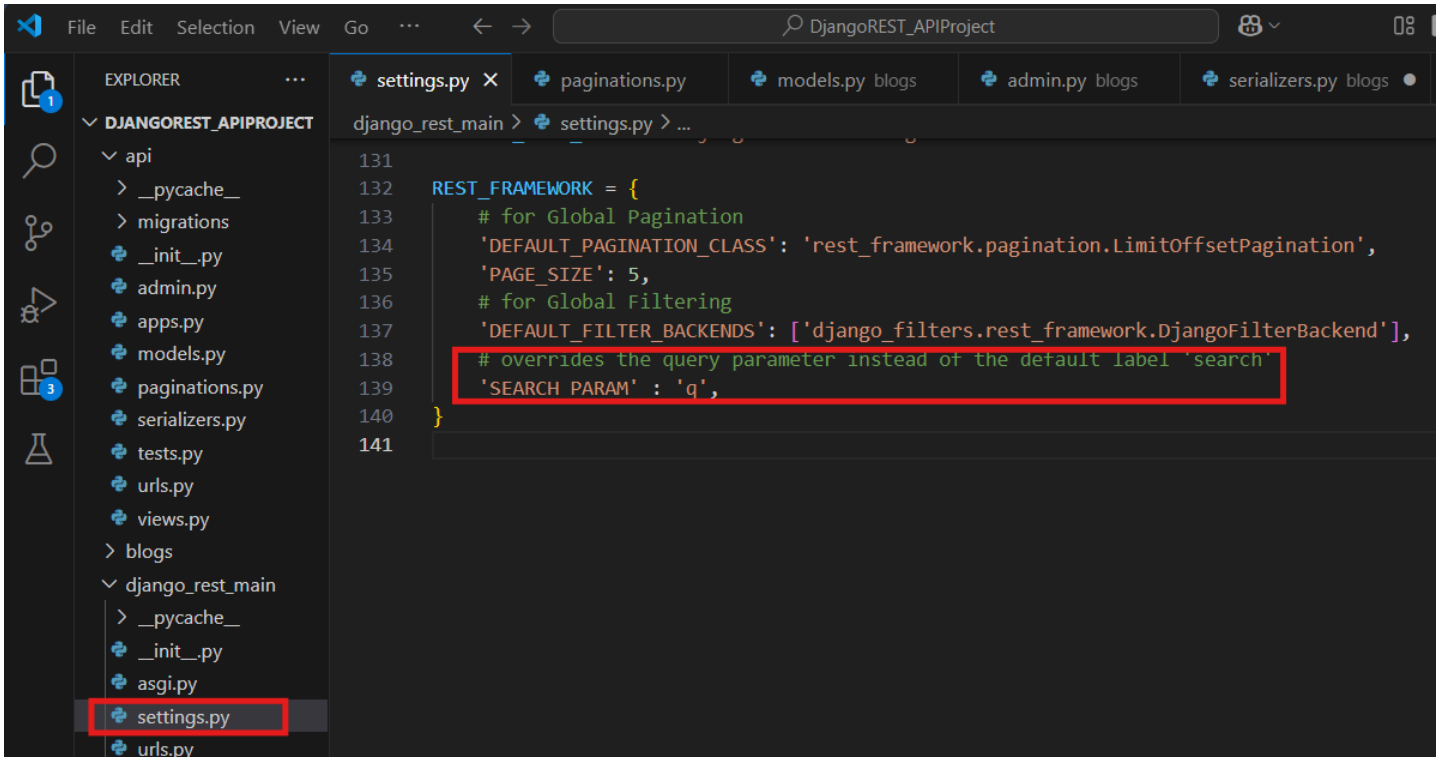

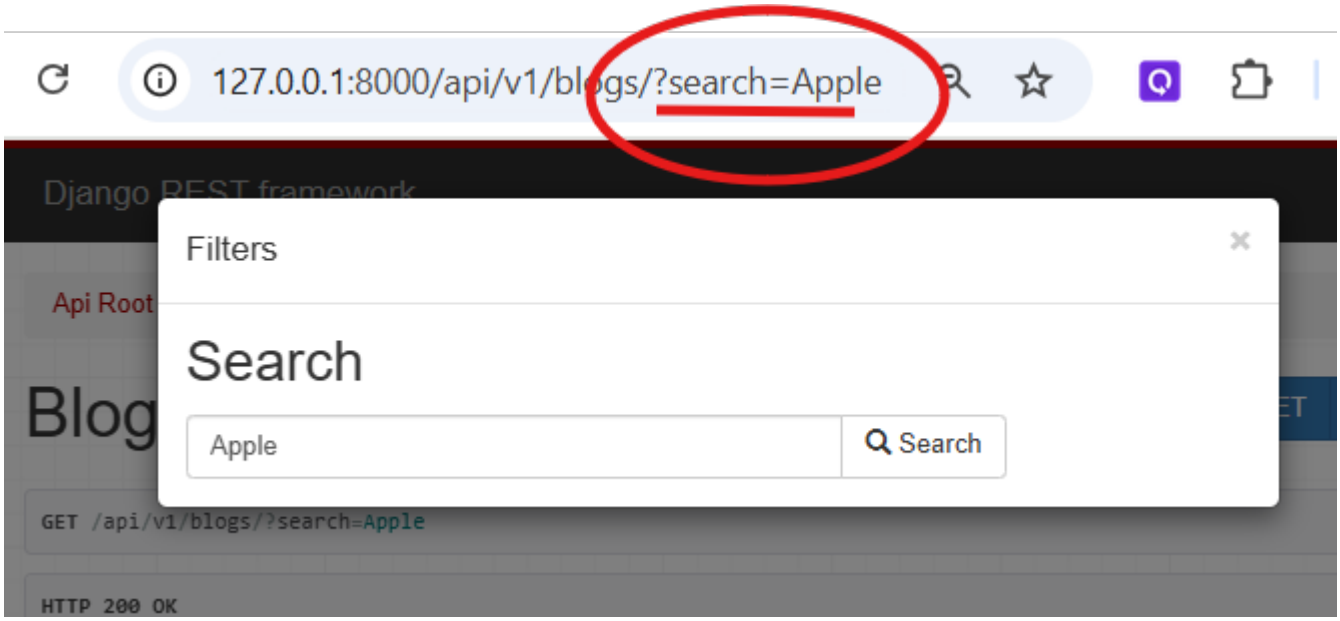

2. Now search thru BLOGS model:

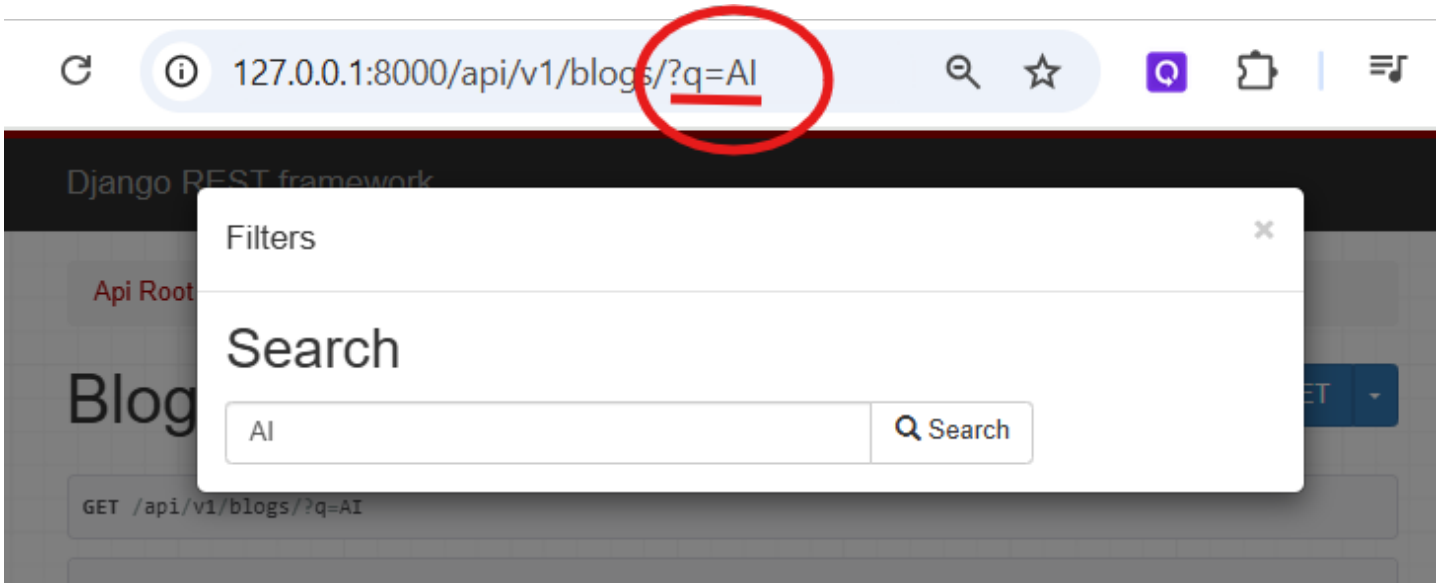

3. If you want to change the search keyword 'search' to 'q,' then update the SETTINGS.PY

File Edit Selection View Go
DjangoREST_APIProject

FROM:

127.0.0.1:8000/api/v1/blogs/?search=Apple
Django REST framework
Filters
Api Root
Search
Apple
Search
GET /api/v1/blogs/?search=Apple
HTTP 200 OK

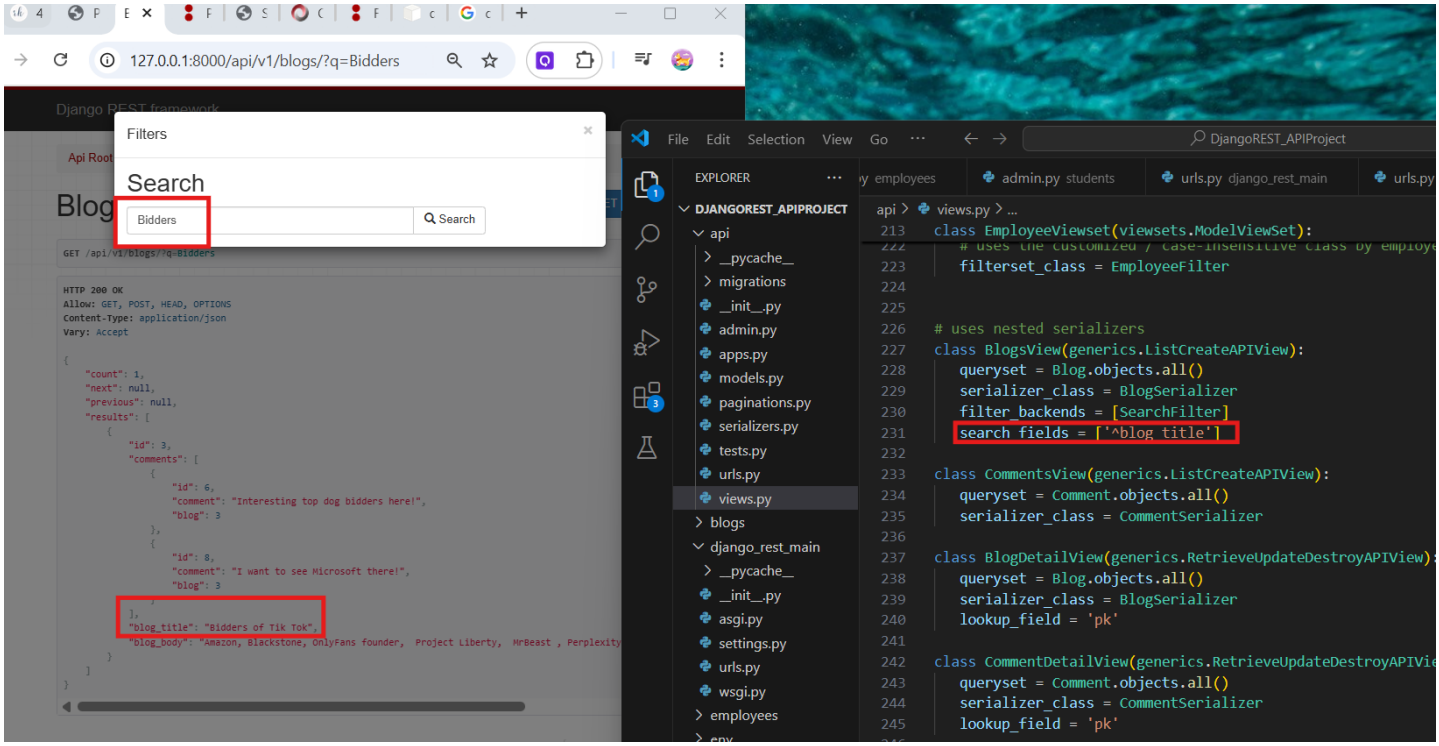

TO:

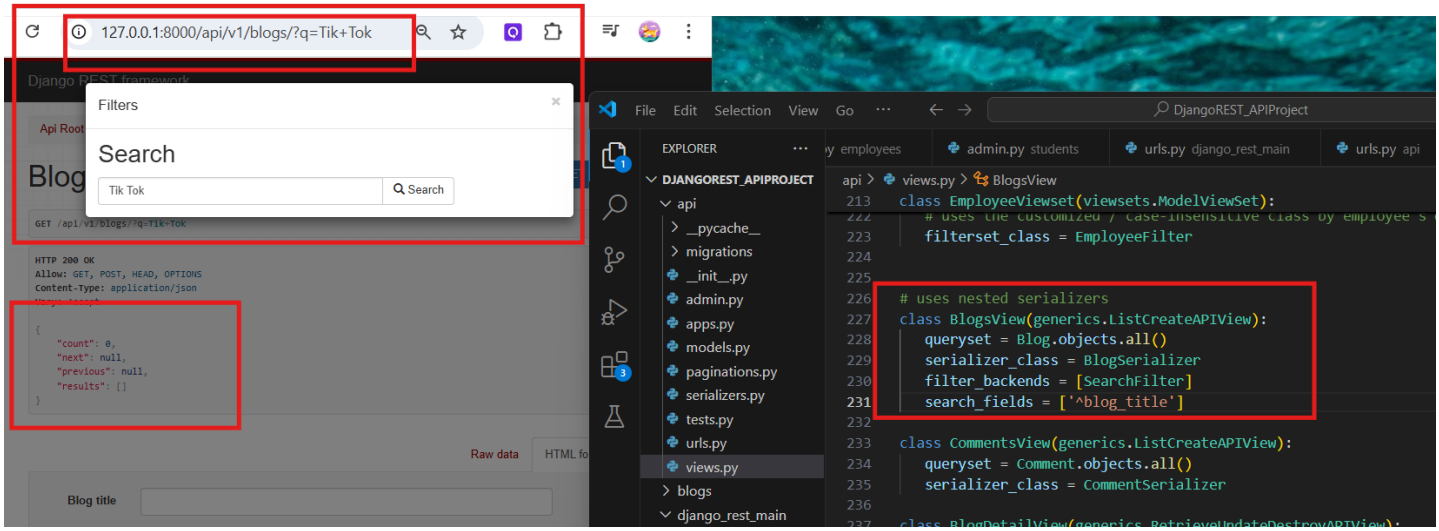

4. To search through the BLOG_BODY:

5. To search for a blog title that starts with a specific keyword, use the caret symbol (^).

But when you use a keyword, not the actual starting word, it won't show any result.
