

## Topic: Best Practices

**Speaker:** VA Wordpress Coach Ralph Danding / **Notebook:** Wordpress Website Development

---

1. Practice all the widgets in a page and see how each one works for a week before building your actual website.
2. Use Wireframe designs
3. Test all designs in different responsive modes: desktop, tablet, mobile
4. Explore each of the widgets in WordPress and also in Elementor.
5. Then make sample prototypes out of existing websites as a reference.
