

## Topic: Best Practices

*Speaker: VA Wordpress Coach Ralph Danding | Notebook: Wordpress Website Development*

---

1. Practice all the widgets in a page and see how each one works for a week before building your actual website.
2. Use Wireframe designs
3. Test all designs in different responsive modes: desktop, tablet, mobile
4. Explore each of the widgets in WordPress and also in Elementor.
5. Then make sample prototypes out of existing websites as a reference.
